Alan Roach in Libya, North Africa, 2005

Thank you for your interest in Baja Designs' dual-sport and off-road adventure products. At Baja Designs, we believe that pavement exists solely to connect riding trails. We're avid off-road motorcycle riders and racers that have ridden all over the world. We are convinced that there is no better way to explore this world than on a dirt bike. Our purpose at Baja Designs is to provide you with high quality custom off road equipment along with the technical and riding/racing experience to back it up. Thanks to our dedicated customers and innovative products, our company has grown tremendously since its inception in 1992. We have matured from being the leading supplier of legalizing Dual Sport Kits to

include being the premier supplier of race lighting, off road lighting and many other bike and ATV enhancing products. We have earned a solid reputation in this industry including being selected as a sponsor of American Honda's off-road team. Thank you again for your interest in our products and we look forward to assisting you with all of your riding needs.

Happy Trails,

Alan Roach - President/Owner
Deanne Moore - Vice President

Dual Sport Kits

EZ Mount Dual Sport Kit

This is the latest generation of Baja Designs dual sport kits. With most of the electrical components pre-mounted & wired behind the headlight, kit installation is quick and easy. Kick start kits are interchangeable between all kick start only bikes.

E-start kits remain bike specific

See page 8 for current applications and pricing

Quick Release Dual Sport Kit

Go from moto to Dual Sport in 15 minutes!! If you don't want a permanent "dual sport bike" but want the ability to be street legal if necessary, look no further. Like the EZ Mount kit, the Quick-Release kit comes with all of the necessary components pre-wired behind the headlight. Along with that, we provide a whole new rear fender with the taillight & turn signals pre-mounted and wired into a single quick-release plug. This means you don't need to identify any individual wires upon removal or reinstallation.

Flush-mount rear turn signals are standard. DOT rear turn signals can be substituted at no extra cost.

See page 8 for current applications and pricing

Classic Dual Sport Kit

This kit remains available for several of the most commonly dual sported bikes. This kit is recommended if you plan to use a custom or stock headlight in conjunction with the dual sport kit.

**See following page for Classic DSK image.*

Dual Sport Kit Contents

Kits Include*:

- DOT Halogen Hi/Low Glass Lens Headlight
- LED taillight
- DOT Turn Signals, (flush mount available)
- Horn
- Ni-Cad Battery (9 oz.) - keeps the lights working when the bike is off
- Rectifier/Regulator (keeps the battery charged)
- Wiring Harness
- NEW! Switch Panel - High Beam Indicator light, turn signal switch, horn, headlight and kill switch
- Parts bag - contains all necessary nuts, bolts, zip-ties, etc.
- Available in all OEM colors including white and black
- Detailed installation instructions

** Some bikes do not require everything listed above.*

** All states require DOT tires, some states have additional requirements such as Speedo/Odo, mirrors, etc. Please check state requirements.*

**** Our all-new 2005 switch assembly** features a modern style push-to-cancel turn signal button and an integrated LED high beam indicator. It now unplugs from the front wiring harness with a quick release connector eliminating the need to unplug any individual components to remove the switch.

Deanne Moore
CEO Baja Designs

Dual Sport Kit - Contents

1. Battery: The battery used in the conversion kits is a solid state Ni-Cad battery weighing 9 ounces. It meets state laws requiring the taillight to be able to remain lit for at least 15 minutes after the engine has been shut off. More importantly, it keeps the lights bright when at a stop on the street when the stator output is low. Unlike with a battery eliminator, the lights won't pulse when the turn signals or brake light are activated, and the horn remains loud.

2. Turn Signals: The turn signals are DOT approved Super Motard style turn signals similar to the stock turn signals on a KTM RXC. They are the only turn signals we have tested that stand up to off-road punishment reliably. Most are mounted directly to the headlight shell at the minimum spacing required by law (some mount using brackets). The rear turn signals mount directly to the rear fender with special spacers and washers. They are tucked in very close, yet still meet minimum spacing requirements. (Flush mount are available)

3. Taillight: The Baja Designs LED Taillight is used in most of our dual sport & enduro lighting kits. The Baja Designs universal LED

taillight is the next evolution in off road motorcycle taillight technology. Combining great looks with the brightness, durability, and low electrical draw of LED's, this taillight far outperforms any other aftermarket taillight available. When turned off, the lens appears clear with no color. When lit, it appears bright red and functions as a running light, brake light, and has three white LED's that face down to illuminate a license plate if necessary.

4. Headlight: DOT approved Baja Designs headlight with replaceable quartz halogen H4 Hi-Low beam bulb, glass lens and high quality optics. Fit with turn signal flasher and special mounting brackets.

5. Wiring Harness: Professional wiring harness with OEM style silicone jacketed connectors, and multi-pin sockets for easy and reliable installation.

6. Rectifier/Regulator: Single phase, full wave rectified voltage regulator. What this gibberish means is that the kit comes with a device to allow you to charge a battery, use an electric horn and electronic flasher with your stock alternator. The alternator on your bike is an AC device, this must be converted to DC in order for these items to work.

The voltage regulator keeps the voltage at the correct level so the lights remain bright, but don't burn out, and the battery is not overcharged. The stock voltage regulator or AC voltage regulator will not allow you to do this.

7. Switch Panel - Turn Signal, Horn, Hi / Low Beam, Hi - Beam Indicator, and Kill Switch: Our all-new switch assembly features a modern OEM style push-to-cancel turn signal button and an integrated LED high beam indicator. It now unplugs from the front wiring harness with a quick release connector eliminating the need to unplug any individual components to remove the switch. Includes kill switch and ignition functions.

8. Brake Light Switch: Most of the Baja Designs dual sport kits use a hydraulic brake light switch incorporated into the rear master cylinder. Hydraulic switches are reliable, easy to install and need no adjustment. A mechanical switch and stainless steel bolt-on bracket is provided for drum systems or where there is no space to install a hydraulic switch. Most states require only primary brake (rear) switching, but front brake light switches are available as an option.

Enduro Light Kits

Tired of having your riding time cut short because the sun went down? With a Baja Designs Enduro Light Kit this is a problem of the past.

"Option 1" kits include our Baja Designs halogen headlight, high/low/off handlebar switch, AC voltage regulator (when required), and a complete wiring harness for a bolt-on, plug-in installation.

"Option 2" kits include everything listed above as well as one of our LED taillights and a brake light switch.

For most smaller bikes our kits are built bike-specific. The included headlight plastic is color matched to the bike's OEM color. See chart below for the correct part number to order. For full size (kick-start) MX bikes equipped with a lighting coil, we offer a universal Enduro kit that fits any model. To order, use the part number that corresponds to the option you want and then add the desired headlight color designation listed below.

Taillights

Baja Designs LED Taillight

The Baja Designs LED Taillight is used in most of our dual sport & enduro lighting kits. The Baja Designs universal LED taillight is the next evolution in off road motorcycle taillight technology. Combining great looks with the brightness, durability, and low electrical draw of LEDs, this taillight far outperforms any other aftermarket taillight available. When turned off, the lens appears clear with no color. When lit, it appears bright red and functions as a running light, brake light, and has three white LED's that face down to illuminate a license plate if necessary. Designed to fit horizontal (motocross) style fenders, it can easily be mounted to almost any late model bike, from minis to full size dual sports. Mounting hardware and wiring instructions are provided.

Baja Designs LED Taillight60-0709\$59.95

Acerbis Enduro Taillight

This taillight is designed to mount on top of the rear fender and is used primarily for older bikes with rear fenders that curve downward (such as on older XR's.) It uses a traditional incandescent bulb that functions as a running light, brake light, and license plate illuminator light.

Acerbis Enduro Taillight60-0700\$38.00

Baja Designs Brake Light Kit

CRF250X Kit Shown

If you just want to add a brake light to your bike's existing taillight without adding a complete dual sport kit, Baja Designs has the solution. We offer brake light kits for most popular trail bikes that are cost effective, easy to install, and designed to interface with the bikes stock wiring harnesses.

**CRF250X & CRF450X stock LED taillights cannot be made to work as brake lights. Brake light kits for these bikes get a Baja Designs LED taillight.*

HID Information

HID bulbs are a quantum leap forward in off-road lighting. HID (high intensity discharge) lamps produce daylight quality light and brightness, far outperforming conventional quartz halogen lighting systems. These bulbs are the same ones being used by BMW, Mercedes and Lexus in their OEM headlights. A single HID bulb produces the equivalent of 250 watts of halogen lighting power while only consuming 50 watts of power and generating far less heat. They also do not use a filament; they fire an

18,000-volt electric charge between two electrodes encased in a xenon gas-filled bulb. Since the bulb has no filament, vibration is not a detriment to its operating life (2000 hours). All this makes HID Bulbs a perfect fit for off-road use.

Baja Designs offers a kit to adapt an HIDbulb to your existing stock or after-market halogen headlight. The kit consists of a high voltage controller unit, a 35 watt HID bulb with a built in ignitor, a bulb mounting adapter, connectors, a simple wiring harness,

ounting hardware and detailed installation instructions. The controller is fully waterproof and epoxy encapsulated to stand up to weather and off-road abuse. The controller provides the power needed to run the HID bulb, weighs 5 oz.. and measures 3" x 4" x 1/2"

NOTE: HID conversions are only legal for street use when used as auxiliary or driving lamps. HID bulbs provide high beam only for off-road applications.

Motorcycle Performance Lighting - Diablo HID Headlight

"Diablo" HID Headlight

Baja Designs is proud to introduce the newest addition to our line of HID lighting, the Diablo HID. Made specifically for electric start bikes, the Diablo is the lightest, most affordable HID headlight ever offered. We have pre-mounted a 5oz. Gen 5 ballast and HID bulb to an OEM style headlight shell with quick release rubber straps that fit all types of fork tubes. A simple wiring harness and compact handlebar mounted switch is available to help make it a plug-and-play

installation. The Diablo light was the exclusive headlight used in the 2005 Dirt Rider 24 Hour torture test.

To run the Diablo light, your bike must be equipped with an adequate DC charging system that can maintain a battery charge when there is a 40W approximate draw on it.

See application chart below.

Motorcycle Performance Lighting - Tecate HID Headlight

Jeremy McGrath
"Dirt Rider 24 Hour"

"Tecate" HID Headlight

Got light? With Baja Designs Tecate light you do, and lots of it. Combining modern Xenon HID & Halogen technology, the Tecate light is the lightest, brightest, number plate style headlight available today. Designed specially for aggressive trail riding, the Tecate light uses an ultra bright HID bulb in its main lens that gives you incredible distance projection while a Halogen MR-16 bulb mounted above the main lens produces a close-range peripheral pattern illuminating the area directly in front of the bike. Since its inception, the Tecate

light has quickly become the headlight of choice for most night & 24-hour races.

The Tecate light attaches solidly to the fork tubes using rubberized clamps & mounting brackets that are slotted for easy angle adjustment. It can be removed and reinstalled in minutes and comes pre-wired with its own water-proof toggle switch. If the application calls for it, a custom wiring harness is also included that interfaces the Tecate light to your bike's stock wiring harness.

"Tecate" HID Headlight Pricing

Tecate w/MR16..... (with DC charging system)	\$499.00
Tecate w/MR16..... (without DC charging system)	\$459.00
Tecate without MR16 (with DC charging system)	\$459.00
Quick Release Race Mount Kit.....60-0092	\$120.00

*kick-start only models may require a DC charging system while Electric start models do not.
(Rectifier Regulator & Battery)*

Notes:

Suggested Use: Tight trails and fire roads (to approximately 70 mph)
Weight: 3.75 - 4.5 lbs.
Bulb type: HID (output equal to approximately 200-250 watts)
The motorcycle/quad must have a minimum of 120-130 watts of power to run the Tecate light.
Wattage of MR16 varies according to the bike's output.
2000-2003 KTM 400/450/520/525 must have a stator rewind and run the Baja Designs rectifier/regulator with this system
Available in all OEM matched colors: Yellow, Green, Orange, Black, White, Red, Blue

Premium Optics - High quality glass with focal points optimized for HID or Halogen

Vibration isolated - To prolong component life

Aluminum Quick Adjuster - Allows tool-less rapid adjustments

Tig welded 4130 Chromoly frame - Strong and lightweight

Patented Quick Release System - makes removal of lights for daytime riding a snap

See page 19 for exploded view of lights

NEW! High Impact glass reinforced UV nylon housing to protect the integrated Gen 5 ballast & bulb

La Paz Single HID and Halogen Race Lights

Our La Paz 8" single is available in either HID or Halogen. This is Baja Designs' original signature light that you have seen on numerous race winning bikes. These lights combine versatility with function, creating a great all around light for any riding situation.

The La Paz single excels most in trails or on fire roads where you don't have to maintain speeds of 80-100 mph for long periods. In fact, Ty Davis used the 8" HID light to win the "24 Hours of Glen Helen" in '03 and '04.

Lightweight Design - HID weighs 4 lbs. 9.5 oz.
Halogen weighs 4 lbs. 2 oz.

- Battery powered, so these lights remain lit for a couple minutes even of bike is not running

* Gen 5 Ballast and bulb (HID Only) makes the light lighter, safer, and more reliable and are protected by a double o-ring sealed high impact glass reinforced housing.

- Halogen easily upgrades to HID.

Dual HID and Halogen Race Lights

Baja Designs Dual 8" HID and Halogen Race Lights are among the best in the industry. The dual HID race light is simply the most powerful lighting system available for motorcycles and quads today. Our HID series of lights offers the latest in HID technology. It features a combination of spot and driving light, which makes our lights virtually impossible to outrun. Plus, under heavy braking the spotlight will illuminate the area ahead of the rider even though the front suspension is compressed.

We also have a Halogen version of this same light, it is a lightweight inexpensive solution to riding at night. Like the Dual HID, the Dual Halogen features a tig-welded chromoly frame, Billet aluminum quick adjust knobs, premium Baja Designs optics, and Baja Designs patented quick release system which makes removing these lights quick and easy.

Halogen easily upgrades to HID.

Dual Race light Pricing

Suggested Use: High Speed Racing

Weight: 7.5 - 8.5 lbs.

Bulb type: HID (output equal to 200-250 halogen watts of light) - Halogen (H-1 55 - 130 watt)

-The motorcycle must have a minimum of 150 watts of power to successfully run the dual HID lighting setup. Machines with less wattage output (120-150 watts) can run this setup as long as one light is turned off in tight terrain (low RPM riding). If the bike does not have enough power, the stator will need to be rewound where applicable.

NEW! Soltek Truck/Buggy Lights

Soltek La Paz Single HID and Halogen

Finally, a lightweight (under 5 lbs!), integrated ballast, pedestal mount, 8" HID Light. Baja Designs - the leader in off-road motorcycle race lighting - brings more than 10 years of experience to the 4 wheel market.

Located at the top of the Soltek light is the Baja Designs patented, billet aluminum, Quick Adjust System. This allows for on the fly, up-down adjustment of the light - no tools required. Of course, each light also adjusts side to side. The light mounts easily to your existing bumper or roll cage using either a one or two hole

mounting configuration located at the bottom of the chromoly frame.

The La Paz single HID weighs a low 4 lbs. 6 oz. It has a 5 oz. Generation 5 ballast which is smaller, lighter, and more reliable than the competitions Gen 1 & Gen 4 ballasts. The ballast is mounted securely inside the light eliminating the need to mount an external ballast.

Halogen easily upgrades to HID

Available in Chrome, Black Powder Coat, or Raw for custom painting

Center Mounting System -

Eliminates the tendency for lights to vibrate out of adjustment

Aluminum Quick Adjuster -

Allows tool-less rapid adjustments

Vibration isolated -

To prolong the life of the bulb and ballast

Tig welded 4130 Chromoly

frame - Strong and lightweight

3 Hole Mount -
Provides greater stability

High Impact glass reinforced UV
nylon housing to protect the
integrated Gen 5 ballast & bulb

Premium Optics - High quality
glass with focal points optimized
for HID or Halogen

2005 No Fear NF150

Soltek Single Specs.

• PRE-BUILT • PRE-WIRED • NO HEADACHE • QUICK MOUNT •

By combining our extensive racing experience with our comprehensive knowledge of HID lighting and optics, Baja Designs has developed the most innovative lighting system on the market - **The Pre-built, Pre-Wired, No-headache, Quick Mount Soltek light system.**

Each light and its ballast are pre-wired and rubber mounted to a light weight tig-welded 4130 chromoly frame. The frame mounts to your vehicle using heim jointed strut rods and easy mount billet clamps or weld on tabs. The light bar can then be removed or installed in

about 30 seconds via 4 quick mount pins and a quick connect wiring harness.

See the previous page for details on the lights.

Frames available in Chrome, Black Powder Coat, or Raw for custom painting

Light bars are available in any combination of driving and pencil beams - 3 to 6 lights.

Weld on versions also available

Heim Jointed Strut Rods -
allow flexible mounting locations

Lightweight - A complete 4 light
HID system weighs 21 lbs. 3 oz.

Tig Welded Chromoly Frame -
Strength and Durability

Billet Aluminum Clamps - No
welding or fabrication required
on 1.5" or 1.75" tube frames.
(or use our weld on tabs)

Universal Mount System - 4 pin
locations make this system ideal
for any application

Pre-Wired - For no
hassle installation

Baja Designs Mirror

The Baja Designs mirror easily folds out of the way when the pavement turns to dirt, yet maintains its stability at high speeds enabling a clear view of what is behind you.

**Bike must be equipped with a mirror mount. See Below*

Item Desc.	Part #
Mirror	18-0090

Price: \$13.95

Acerbis Mirror

The Acerbis mirror is a great option when you just want to be "legal" and nothing more. At moderate to faster speeds, this mirror renders a blurred view because of vibration.

Item Desc.	Part #
Black - left	18-0081
Black - right	18-0082
White - left	18-0083
White - right	18-0084

Price: \$18.45

Billet Mirror Mount Perch

This anodized mount replaces the rear clamp on the clutch perch, which accepts a mirror with a 10mm thread. This mount is the cleanest way to mount a mirror on your bike without taking up considerable space on the handlebars.

Item Desc.	Part #
Billet mount	18-0080

Price: \$15.95

Emgo Mirror Mount

chrome

A cost effective alternative, this two-piece mount bolts directly to the handlebars. The Emgo unit is lightweight and accepts most mirrors.

black

Magura Mirror Mount Clamp

Designed to be used with Magura's hydraulic clutch, which comes standard on all late-model KTMs, among others, this clamp replaces the back of the clutch perch. Accepts most mirrors.

Item Desc.	Part #
Clamp	18-0101

Price: \$20.95

Analog Backlit Speedometer

A well made Japanese speedometer that features backlighting, cumulative odometer and a resetable trip meter. It has a rather optimistic top speed of 160 mph. It is small in size, fairly accurate, comes with a generic mounting bracket, and is great for meeting state requirements for a non-resetable odometer. It will attach directly to any stock Japanese odo drive cable.

Dimensions: 2.5" Dia x 2.5" High

Item Description	Part #	Price
Analog Speedometer	37-0002	\$64.95

Lynx Speedometer

**Constant Backlight**

Lynx is equipped with a backlight for easy viewing during night-time operation and can be connected to the vehicle's power system.

Riding Information at Your Fingertips

Speed, Distance, Average Speed, Maximum Speed, Stop Watch, and Clock

Large Screen

1.25"x3.25"

Introducing Enhanced Feature Sets:**Enduro Mode:**

Allow both distance and pace adjustments.

Lap Timer Mode:

Rider managed counter tracks up to 18 laps.

Price: w/Remote \$119.95 w/o Remote \$99.95

Endurance 18 Function Digital Speedometer

The Endurance motorcycle computer offers four screens of information - everything you need or want at the touch of a button. It is designed to handle harsh off-road conditions and includes a one-year warranty. The Endurance mounts to Crossbar, Pro-Taper and Magura type handlebars and includes back lighting for night use. It uses a custom fit sensor/cable assembly to compute and display the following:

<i>Current Speed</i>	<i>Average Speed</i>
<i>Maximum Speed</i>	<i>Distance</i>
<i>Odometer (track total miles)</i>	<i>Riding Time</i>
<i>Trip Time - stop watch</i>	<i>Clock</i>
<i>Lubrication reminder</i>	<i>Maintenance reminder</i>
<i>Accumulated riding time- (track total hours)</i>	<i>Incrementing and decrementing- (for Enduros or Dual Sport rides)</i>

Measurements: (LxWxH) 3.54" x 1.79" x 0.59"

Price: \$79.95 (specify application when ordering)

Billet Speedometer Mount/Guard

Protect your Endurance Speedometer or your expensive ICO timekeeping equipment with a Baja Designs Billet mount and guard.

Part# 37-0017 Price \$59.95

ICO Computers

We personally have logged over 37,000 miles on one ICO computer with absolutely no problems. These are the most bullet-proof off road computers on the market today.

Dual Sport: Adjustable Wheel size, Auto Calibrate/Mileage adjustment, Speedometer, Max Speed, Clock/Metric operation/Non-volatile cumulative mileage/Automatic shut-off

Baja Designs Stator Rewinding

Do you like to ride after dark? You can't power big bulbs without a high output lighting coil. Whether you are running a dual-sport, a play bike, or a full blown racer your lighting system can be improved

with the help of one of our rewound or replacement stators. Our lighting coils are race tested and guaranteed for as long as you own your bike. Typical turnaround time is 2-3 working days. .

**** Higher Output race applications available

External Stators

Our high power 180 watt stator assembly has a billet machined cover, lighting coil, flywheel magnet and voltage regulator. It is a bolt on assembly that supplies lighting power that is completely independent of your bike's ignition system. It can be used to provide lighting power for a dual sport conversion, powerful night lighting, or grip heaters. The flywheel magnet adds 11 oz. to your stock flywheel to smooth power delivery and improve tractability.

Electric Start Kit

This is a complete bolt-on, plug-in electric start kit for 2000 and newer XR650R's. It includes a billet sidecase, powerful starter motor, flywheel ring gear, Yuasa battery, battery tray, cables, relay, starter button, rectifier/regulator, shift lever, and wiring harness. All necessary mounting hardware and detailed installation instructions are included - no fabrication is required. Battery charges from the bike's electrical system. Adds 13lbs. of low placed weight to the total weight of the bike. It is compatible with Edelbrock carburetors and large capacity fuel tanks.

**Stock XR650R stators do not have good low RPM output. Baja Designs highly recommends having the stator rewound to run this product. Refer to page 20 for details*

XR650R04-1020.....\$875.00

Flywheels

A Trailtech replacement flywheel is the perfect solution if you're looking to boost your bike's lighting coil output and maybe add a little flywheel weight for the tight stuff. By using stronger magnets than stock flywheels, Trailtech flywheels yield an approximate 30% increase in lighting coil output over stock. They are available in several weight options for most bikes and will work with either stock or rewound stators. Note that a flywheel-specific puller tool is absolutely necessary for flywheel removal.

Baja Designs Rear Pegs

Baja Designs offers a clean way to add "Rear" pegs to your converted Dual Sport bike. Machined from billet aluminum, these footpegs combine strength with a functional lightweight design. The aluminum pegs pivot with a ball detent to keep them up when not needed. Depending on the application, the "Rear" pegs are available in a bolt on or weld on mounting system.

Honda

XR250/400/600 weld-on kit: 21-0045 \$99.95
XR650 bolt-on kit:

Kickstands

The Baja Designs Kickstand provides the ultimate convenience of a simple, lightweight kickstand. The pivot plate and footpeg hanger are made of heat treated chromoly. To prevent kickstand breakage and to keep the product light, its made of heat treated 7075 aluminum. Instead of pushing the left footpeg out like the competition, the Baja Designs kit replaces the stock left foot peg mount. In addition, the installation process literally takes only minutes.

Available for most late model motorcycles

Price: \$89.95

Baja Designs Baja Baffles

Keep our sport alive! More states are putting noise limits on your off-road motorcycle. Baja Designs has a simple and inexpensive solution. Our Baja Baffle easily surpasses the 96 decibel California law and also the 94 decibel Michigan law. More importantly, it offers better than stock performance. The baffle is constructed of durable stainless steel with a polished end cap. Installation is easy - simply slide the baffle into your OEM muffler. It is held securely in place with a set screw.

**Note to California riders - As of 2003 all off-road motorcycles used on CA public lands must be equipped with a muffler that emits no more than 96 decibels of sound.*

** As of 2006 D37 will be enforcing noise limits*

Application Guide

Honda CRF450R

As soon as Baja Designs received the CRF450R, we realized that this lightweight, powerful four-stroke could be a great threat in the desert of the West or the deep woods of the East. In fact, we raced it in the 2002 Baja 1000 (we finished 3rd in class and 8th bike over

all). Baja Designs has created numerous products to make this bike as good off the track as on. Below is a list of CRF450R specific parts that you can't pass up if you plan to take the CRF off the track to places where few dare.

Wide Ratio Transmission, '02-on	04-1000	\$539.95			

*Required when using aftermarket flywheel

Wide Ratio Transmission

Baja Designs engineered a wide ratio transmission to make third, fourth and fifth gears taller for Honda CRF-R and CR models.

This change makes 5th gear 17% taller than stock, and since the bike already has a pretty good top speed, the final gearing is lowered with a 53 tooth rear Renthal sprocket instead of the stock 50. This gives you a nice low first and second gear with good speed on top.

Auxiliary Oil Tank

Ride your CRF450R faster and farther without having to add oil. The Baja Designs auxiliary oil tank cures the lack of oil capacity available on the CRF450R. It accomplishes this in two ways. First, the tank acts as a recovery module for oil that is blown out of the valve cover vent hose when riding at high RPMs. The oil is routed back into a baffle within the oil tank. Second, the tank also adds another 350 ccs of oil capacity for a total of just over one liter of oil. The tank mounts between the frame rails in front of the engine for a clean OEM look.

Part # 05-0100

Price: \$249.95

Honda CRF250X/450X

At long last, the X's have arrived!. The 250X is a great tight trail machine with its great cornering abilities and balanced suspension. The 450X feels much bigger and is better suited to bigger pilots and more open terrain. Of course at Baja Designs we just couldn't leave these bikes alone. Both bikes can gain more power and snap with exhaust and air box modifications. (These mods require you to rejet your carburetor.) Baja Designs makes an affordable exhaust baffle that opens up the exhaust while still meeting California and Michigan's noise limits.

Both bikes require an absolutely rigid maintenance schedule. Most important is frequent engine side motor oil changes and maintaining a clean air filter. Valve life will be severely shortened if either is neglected. We also recommend checking the valve clearance at least every 300 miles with the 250X and every 500 miles on the 450X.

High rpm extended use requires even shorter intervals. Unfortunately, the stock X headlight looks great but functions horribly. It is only 35W and cannot be easily upgraded. To "shed some light" on this problem we offer a variety of lighting options. Since the fun should not have to end where the pavement begins, our dual sport kit for the X is a bolt-on, plug-in installation with no stator rewinding required. We also offer numerous HID & Halogen race lighting systems in number plate, single, & dual 8" configurations. Note that the stator must be rewound to upgrade the lighting in most cases. Please call Baja Designs to have this service performed. See our lighting section of this catalog for more details.

On top of all the lighting upgrades we also offer a full line of large capacity fuel tanks, skid plates, seat covers & foams, and dual sport computers.

CRF230 & TTR230

Since Honda & Yamaha didn't see the need to add lighting (our favorite subject) to the US versions of the 230's, Baja Designs offers Enduro (off road) lighting kits as well as full-blown dual sport kit packages. These are bolt-on, plug-in kits with no stator rewinding required.

The headlights and taillights we supply in our kits are manufactured exclusively by Baja Designs. The headlight shrouds match the factory plastic perfectly and use only top quality lens/reflector assemblies with halogen bulbs. The taillights we use are modern LED units that look and function better than any other aftermarket taillight for off road motorcycles.

Although not required to run a basic lighting system, the CRF230 and the TTR230 can certainly benefit with the help of one of our race-proven stator rewinds. On both bikes the stator can only support a 35W bulb and still keep the battery charged (which is critical on an electric-start only bike.) A stator rewind from Baja Designs will allow you to effectively run a 55W bulb or HID bulb and still maintain the correct battery charge. Call us to have this service performed.

In addition to our lighting kits & rewinds, we also offer heavy-duty off road skid plates and Trailtech dual sport and ICO computers for both bikes.

Honda XR400 (96-on)

What's a great trail bike without a license plate? With a Baja Designs dual sport kit you don't have to be limited by the pavement (*refer to local laws regarding dual sporting.) Add one of our race-proven stator rewinds to run a high wattage headlight bulb and turn darkness into day.

In stock form, the XR400's intake and exhaust systems are heavily restricted often resulting in hard starting, poor throttle response, and excess heat. The first critical steps are to remove the stock airbox snorkel, exhaust baffles and rejet the bike. California models need Honda's dual taper A16 needle. We offer the HRC spark arrestor and Baja Designs baffle to open the exhaust flow and keep

the noise down. We also offer jetting kits specific to your bike's year and setup.

The stock XR400 headlight comes with a weak 35W incandescent bulb behind a plastic lens with poor optics. It will get you off the trail if you're stuck out after dark but little more. To fix this, we offer several halogen & HID lighting improvement kits to make night riding fun.

To help complete the package we also offer an aluminum full coverage skid plate, a rear foot peg kit, IMS 4 gallon fuel tanks in all colors, Trailtech & ICO computers, and gripper seat covers.

**Honda XR650R (00-on)**

The XR650R is the king of Baja racing and is one of our most popular dual sport conversions. Baja Designs, an official sponsor of the factory Honda Off-Road Racing Team, began working with Honda's XR650R even before it was released to the public. We have spent many hours riding and racing the XR650R in order to develop and evaluate products that make it a better, more reliable and versatile bike.

Based on our experience, we offer the following recommendations. The stock 650 has a very restricted intake manifold, airbox and exhaust system choking off 12 hp of the bikes' power and making it

overheat easily. Baja Designs' HRC Power Up Kit gets the power back, it provides you with an unrestricted manifold, HRC exhaust baffle, needle and proper jetting. Unless you live in a very cold climate, we recommend removal of the thermostat, which tends to stick and inhibit coolant flow. The stock 1.1 Atm radiator cap allows the bike to boil over too easily; we carry 1.8 Atm caps to solve this problem. Add our dual sport kit and big fuel tank for additional versatility and range. Our billet shark fin and heavy duty skid plate add durability. You might also want to add a luggage rack, rear pegs or a digital speedo.

Yamaha WR250/400/426/450F

In 1998 Yamaha took 4-stroke off road performance to the next level with the release of the WR400. After several years of evolution and fine-tuning, the WR still remains as one of the finest performance oriented machines built today.

Unfortunately, WR's don't come with license plates in America so Baja Designs offers dual sport kits in several configurations to help get your WR road legal (*check local laws regarding dual sporting off road motorcycles.)

Don't let the stock fuel capacity on WR's leave you stranded. Combine one of our 1.2-gallon side panel fuel tanks with an IMS or Acerbis large capacity fuel tank to significantly improve your fuel range while still keeping the bike slim & nimble feeling.

The stock headlight on WR's uses a 60W halogen bulb and actually functions pretty good compared to other OEM headlights. However, when compared to one of our Diablo HID headlights, the stock headlight seems little better than a flashlight taped to the fender. If you like to "do it in the dark", there is just no comparison to HID in terms of light intensity and distance projection. We also offer aluminum full coverage skid plates, soft seat foams & covers, Trailtech flywheels, and Endurance computers to help make the WR into the ultimate on/off road weapon.

KTM

Baja Designs loves the KTM 4-strokes for their nimble handling, lightweight feeling chassis and versatile engine packages. We take our KTM's everywhere! From the giant dunes of the Sahara desert to the tight rocky trails of Moab and of course on multi-day dual sport rides, a KTM 450 or 525 is our first choice.

We do have a few recommendations for the KTM. First and foremost, check the valve clearances at least every 1000 miles and change the oil frequently using motorcycle specific synthetic oil. The 450 and 525 come jetted really lean on the needle, so a JD jetting kit improves performance and helps keep the bike from overheating on tight trails. We find the stock seat to be painful for long rides, so the Enduro Engineering replacement seat for the 04-05 KTM's is a must. Stock

KTM EXC fuel tanks are slim but offer little fuel capacity. To extend your range without adding extra girth, Baja Designs makes side-panel fuel tanks that add 1.1 to 1.5 gallons. If you need even more fuel range, we stock the full line of IMS large capacity tanks. Since they don't come with one stock, the KTM four strokes certainly need one of our aluminum full-coverage skid plates. A Trailtech or ICO computer is nice if you need speed and mileage info for dual sporting or enduro riding.

Add our EZ-mount dual sport kit and you'll be able to take your KTM everywhere too. If you enjoy riding after the sun goes down, check out our many lighting options. We offer everything from dual HID race lights to lighting improvement kits and everything in between.

Helmet Radio System

Baja Designs introduces a helmet to helmet communication system modeled after the race radios that Team Honda uses. It easily installs into most full-face helmets. The system offers a noise canceling aircraft microphone that cuts wind and engine noise and allows conversation at speed. It also features loud, high efficiency speakers that can be used even if you wear earplugs. A rugged push to talk button on the handlebars turns the microphone on and off. The system connects to most hand held VHF or UHF radios such as the

Motorola Talk-About and Kenwood FRS radios as well as more powerful five-watt radios. The radio rides in your fanny pack, camelbak, or on your chest protector.

Radios are sold separately. When ordering this product please specify which make & model of radio it will be used with so the correct interface cable can be provided.

Technical Support & Installation

Tech and Installation

The Baja Designs team stands ready to assist you. Whether it's installing your new Dual Sport Kit, or troubleshooting a lighting problem, our Tech and Installation team can walk you through every step. And if you don't have the time to install it yourself, we'll install

it for you.

Also, the Tech support section of our web site has an extensive Frequently Asked Questions section as well as installation manuals for all of our products.
