The Industry
LEADER
in Forged Racing
PISTONS!

JE Pistons opened its doors for business in 1947 with one simple objective, to supply the racing community with the highest quality pistons and components available in the marketplace. Although times, people and equipment have changed, our objectives and goals have remained constant. Today, JE is the largest manufacturer of custom forged racing pistons in the world. Offering the shortest lead times in the industry and a 98% order fill rate, JE is the definitive source for all of your high performance needs.

The JE Complex in Huntington Beach, California encompasses over 60,000 square feet of the most modern performance piston manufacturing equipment in the industry. JE's implementation of the most advanced CNC machining technologies available, with over 75 state of the art CNC machines in operation, emphasizes our commitment to deliver the highest quality pistons, pins, rings and components available today. Industry leading processes like Ultra Crown[®], a digital three-dimensional piston crown machining process, and Ultra Groove[®], a machining operation that provides unprecedented flatness of ring grooves (tolerances to within 60 millionths of an inch), are some examples of that commitment.

Our fully staffed, climate controlled QC (Quality Control) department utilizes the latest equipment to ensure the highest quality pistons available anywhere. F.E.A. (Finite Element Analysis), which predicts the thermal and structural stresses a piston will experience before it goes into service, enables JE to test and

JE PISTONS

race simulate our product before it ever sees a racetrack. Furthermore, the lessons we learn through our involvement in racing series like NASCAR, IRL, NHRA and many others, translate directly into the high quality, precision custom and shelf parts that we offer to you, our customer.

Our investment in technology and equipment is an investment in our future as well as our customers'.

We preserve that investment by remaining committed to the philosophy of our founders;

JE Pistons will always provide superior parts . . . developed through extensive research . . .

employing the latest high-tech manufacturing procedures and quality controls.

NOTICE: Due to the nature of performance applications, all JE Products are sold without any expressed warranty or any implied warranty of merchantability or fitness for a particular purpose. JE Pistons shall not, under any circumstances, be liable for any special, incidental or consequential damages, including, but not limited to, damages or loss of other property or equipment, loss of profits or revenue, cost of purchased or replacement goods, or claims of customers of the purchaser which may arise and/or result from the sale, installation or use of these parts. JE Pistons reserves the right to make product improvements and changes without notice and without incurring liability with respect to similar products previously manufactured.

All parts shipped F.O.B. Huntington Beach, California • All parts are not legal for sale on pollution controlled motor vehicles • All trademarks, names or logos are property of their respective companies.

OUR FACILITY

TECHNOLOGY CENTER

Our new Technology Center offers some of the most advanced piston design and analysis technology in the industry. We maintain the most modern climate controlled clean room inspection facility to assure unrivaled quality assurance. This center includes equipment such as Zeiss Prismo S-ACC CMM, Federal Formscan tester, Mahr-Federal form tester, Taylor Hobson Profilometer, Zeiss Metallograph, Ricardo's ring pack simulation code and the latest in non-linear FEA Code.

SALES & MANUFACTURING

Our customer service, sales and manufacturing are housed in 2 of the 3 modern buildings in the JE Complex. JE's staff of sales technicians and customer service support personnel all share the same passion, racing. This is why JE offers the highest quality professional and technical support for all your piston and component needs. JE Pistons' manufacturing department is the largest, most modern facility for forged performance piston manufacturing in the industry. JE has over 75 late-model CNC machining and turning centers. Our pistons are manufactured with CNC machines utilizing "no set-up" technology. As a result of our advanced tooling and fixturing technologies, JE is able to provide the industry's shortest lead-times while maintaining the most consistent, tightest tolerances in the piston industry. JE offers the highest quality piston available today.

DISTRIBUTION CENTER

The completion of Building #3 (pictured below), a brand new warehouse and distribution center in October of 2002 strengthened JE's position as the undisputed leader in the performance piston industry. Offering the most complete line of shelf pistons, rings and pins available, over 6000 different part numbers, and a 98% order fill rate, JE has the product you want when you want it.

NEW PRODUCTS

CARRILLO
INDUSTRIES

Since 1963, Carrillo has been supplying the automotive, motorcycle and racing industry with premium connecting rods. Carrillo combines aerospace technology with years of competitive racing and manufacturing experience to deliver premier connecting rods for extreme performance applications. Carrillo maintains a parts library of over 15,000 rods, and can custom make virtually any rod for your sport compact application. JE has a complete selection of Carrillo rods in stock and ready for immediate shipment.

F.S.R. FORGINGS

JE is proud to introduce our new line of high performance Sport Compact pistons utilizing FEA (Finite Element Analysis) designed FSR (Forged Side Relief) forgings. FSR pistons are now available for Honda B18C engines and Honda B20B4 engines with VTEC cylinder heads with many more applications soon to follow. The FSR forging is a race proven design with thousands of miles logged in NASCAR, IRL and FIA World Rally Championships. These extremely lightweight forgings feature reduced skirt lengths and widths that minimize contact with the cylinder wall, which in turn lowers friction and increases horsepower. The FSR design also reduces piston crown deflection which helps to maintain ring groove flatness and allows a better seal. Contact your JE sales representative to determine how the FSR design can help you.

JE PRO SEAL
PISTON RINGS

With our JE Pro Seal™ ring program, JE offers the largest and best selection of high quality piston rings in the industry. Pro Seal rings are available in bores sizes ranging from 2.000" to 5.000"+ in both metric and standard sizes. JE Pro Seal rings are available in different materials and shapes designed specifically for your application. From NDRA to IRL, NHRA to the Street/Strip enthusiast, JE Pro Seal rings are the best choice for all of your piston ring needs.

COMETIC
GASKET **NEW!**

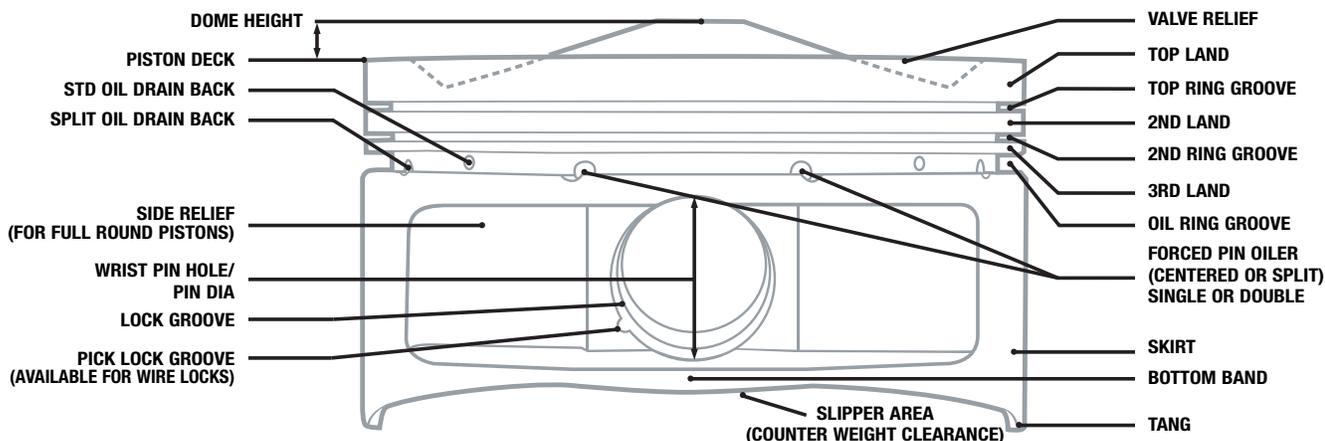

Cometic gaskets are now in stock and available from JE Pistons. Cometic has cutting-edge, computerized designs and a high-tech manufacturing facility that provide you with the highest quality gaskets available. Cometic gaskets are line listed in this catalog next to the piston part number. Gaskets are not included with your piston order and must be purchased separately. Please call your JE Sales Representative for technical support.

PISTONS

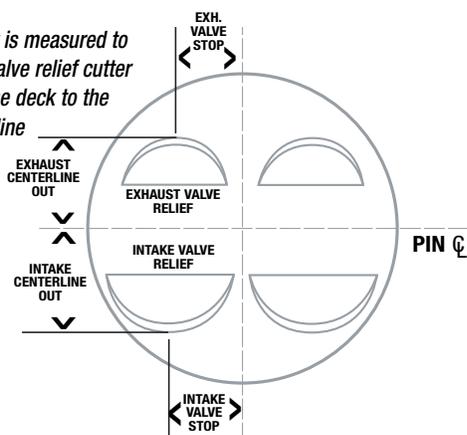

PISTON TERMINOLOGY

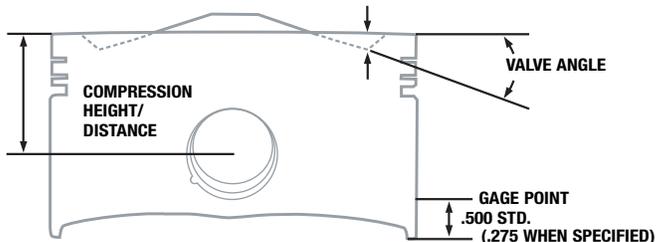

VALVE LOCATION TERMINOLOGY

Centerline Out is measured to where a 90° valve relief cutter would meet the deck to the piston center line

VALVE POCKET DEPTH MEASURED VERTICALLY FROM THE PISTON DECK TO THE DEEPEST PART OF THE VALVE RELIEF RADIUS

PISTON TO WALL CLEARANCE

4032 Alloy PISTONS

	Bore Range	Min. Clearance
Sport Compact	2.500 to 3.625	.0022 to .0028
Sport Compact	3.626 to 3.999	.0025 to .0035

4032 Additional Clearance Guide Lines

Drag Race	+ .0010 - .0020
Turbo/Nitrous	+ .0005 - .0010
Road Race	+ .0005 - .0010

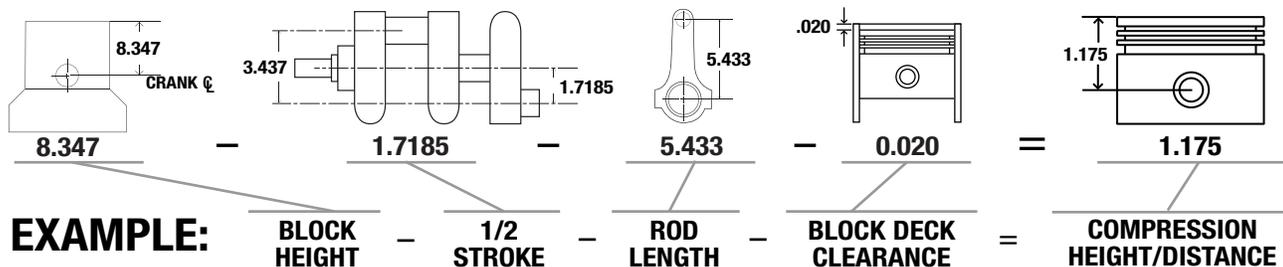

2618 Alloy PISTONS

	Bore Range	Min. Clearance
Sport Compact	2.500 - 3.625	.0025 - .0035
Sport Compact	3.626 - 3.999	.0030 - .0040

2618 Additional Clearance Guide Lines

Drag Race	+ .0010 - .0020
Forced Induction/Nitrous	+ .0015 - .0025
Road Race	+ .0015 - .0020
Filled block	+ .0015 - .0025

COMPRESSION HEIGHT

JE designs are specifically engineered for extreme applications up to, and including, professional competition. In this environment, the higher compression ratios, highest boost or heavy nitrous usage necessitate the higher tensile strength 2618 aluminum alloy, other features are listed below.

- Application specific forgings for an optimized, uniform crown thickness
- Contact reduction groove to minimize frictional drag
- Accumulator groove for increased top ring stability and sealing
- CNC-machined side relief with lower support band for additional skirt strength
- Honed pin bores, double pressure fed pin oilers & wire locks included

Physical Properties of 2618

Nominal Density	2.81 g/cc	.100 lb/in ³
-----------------	-----------	-------------------------

Mechanical Properties of 2618

Tensile Strength, Ultimate	440 MPa	64,000 psi
Tensile Strength, Yield	370 MPa	54,000 psi
Modulus of Elasticity	74 GPa	10,400 psi
Fatigue Endurance Limit	125 MPa	18,000 psi

SRP Pistons are designed for street/strip applications utilizing many compression ratio combinations compatible with pump gas as well as moderate turbo boost and nitrous oxide. SRP sport compact pistons are forged from 4032 low-expansion aluminum alloy for smooth and quiet operation.

- Honed pin bores with single, pressure fed pin oiler
- More economical because of forged side reliefs (reduces machining time) and thicker ring lands to accommodate a wider variety of applications
- Double Spiro locks included

Physical Properties of 4032

Nominal Density	2.68 g/cc	.097 lb/in ³
-----------------	-----------	-------------------------

Mechanical Properties of 4032

Tensile Strength, Ultimate	380 MPa	55,000 psi
Tensile Strength, Yield	315 MPa	46,000 psi
Modulus of Elasticity	79 GPa	11,400 psi
Fatigue Endurance Limit	110 MPa	16,000 psi

Coefficient of Thermal Expansion

2618 aluminum expands approximately 15% more than 4032 aluminum, thus the 2618's initial piston-to-wall clearance has to be 15% greater. This difference is most noticeable during a cold engine start. When cold, the 2618 piston can rock back and forth producing a slight noise until the aluminum expands. Both types of aluminum have approximately the same clearances once the pistons have expanded and the engine is running at operating temperatures.

Coefficient of Thermal Expansion for 2618

Temperature Range		Average Coefficient	
°C	°F	µm/m • K	µin/in • °F
-50 to 20	-58 to 68	20.6	11.4
20 to 100	68 to 212	22.3	12.4
20 to 200	68 to 392	23.2	12.9
20 to 300	68 to 572	24.1	13.4

Coefficient of Thermal Expansion for 4032

Temperature Range		Average Coefficient	
°C	°F	µm/m • K	µin/in • °F
-50 to 20	-58 to 68	18.0	10.0
20 to 100	68 to 212	19.5	10.8
20 to 200	68 to 392	20.2	11.2
20 to 300	68 to 572	21.0	11.7

CUSTOM PISTONS

TO ORDER CUSTOM PISTONS, PLEASE USE THE CUSTOM PISTON ORDER FORM LOCATED ON PAGE 21 OF THIS CATALOG OR ON OUR WEBSITE WWW.JEPISTONS.COM

STANDARD CUSTOM PISTON FEATURES

- Fully CNC Machined Piston for Consistent Quality
- Precision Machined CNC Ring Grooves for Better Sealing
- 2618 High-Strength, Low-Silicon Aluminum Alloy
- Diamond Turned Skirts
- Radiused Valve Reliefs
- Single Forced Pin Oilers
- Machined Side Reliefs on Full Round Forgings
- Pick Lock Grooves (for use with wire locks)
- Lock Grooves Machined for Carbon Steel Spiro Locks (other options available)

CUSTOM PISTON MOTOR/STYLE CODES

Code	Description	Code	Description
Sport Compact (4 & 6 Cylinder)		Sport Compact (8 Cylinder)

101-2-4	Flat Top 4-Valve	102-2-4	Flat Top 4-Valve
101-3-2	Dish 2-Valve	102-3-2	Dish 2-Valve
101-3-4	Dish 4-Valve	102-3-4	Dish 4-Valve
101-1-2	Dome 2-Valve	102-1-2	Dome 2-Valve
101-1-4	Dome 4-Valve	102-1-4	Dome 4-Valve

CUSTOM PISTON ORDER EXAMPLE

To calculate custom piston pricing, determine the motor type (Honda, Mitsubishi, etc), piston style (flat top, dome, dish, or inverted dome), and which custom piston options you require.

DESCRIPTION	CODE	PRICE
Honda Flat Top	101-2-4	\$X.XX
Pin Fit	PF	\$X.XX
Contact Reduction	CD	\$X.XX
Ultra Groove	UG	\$X.XX
Vertical & Lateral Gas Ports	VL	\$X.XX
Double Pin Oiling	DP	\$X.XX

CUSTOM FEATURE CODES

Code	Description
PF	Honed Pin Bore (Pin Fitting)
CD	Contact Reduction Grooves
AG	Accumulator Groove
LG	Lateral Gas Ports (10*)
VG	Vertical Gas Ports
VL	Vertical & Lateral Gas Ports
UG	Ultra Groove
UP	Ultra Groove with Lateral Gas Ports (10*)
UV	Ultra Groove with Vertical Gas Ports
DP	Double Pin Oilers
BO	4 Bottom Pin Oilers
PV	Plunged Valve Reliefs
TV	Tulip Valve Pockets
NS	Notch Skirt
OP	Offset Pin

★ 10 Gas Ports Standard, Additional Gas Ports Incur an Extra Charge

Milling Options

PB	Plunge Bosses (Interior or Exterior)
SB	Spin Boss
CB	Chamfer Pin Boss
MC	Mill Under Crown
MB	Mill Pin Boss Width
WM	Mill Skirt or Window Mill
FM	Cavity Milling
SE	Skirt Register

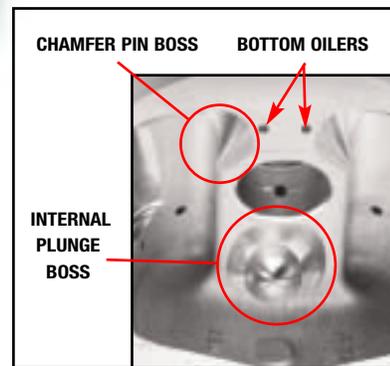

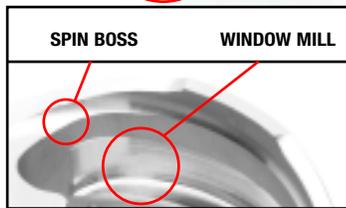

Ultra Crown

US	One-Time Engineering Fee
UD	Machining per Piston Dome
UC	Machining per Piston Inverted Dome

Forged Side Relief

FS	FSR - Forged Side Relief
FE	FSR - external bracing and cavities
FC	FSR - external and internal bracing and cavities

CUSTOM OPTIONS

(UD) Ultra Crown Dome (UC) Ultra Crown Inverted Dome

The Ultra Crown machining process allows incredibly precise dome to cylinder head tolerances. By mapping the exact shape of a piston or cylinder head, optimum compression and quench characteristics can be achieved.

(VG) Vertical Gas Ports:

Vertical holes in the deck of the piston, allows combustion pressure to directly enter behind the top ring on the power stroke, thus pressurizing the area behind the top ring for greater ring to cylinder wall seal. During the rest of the cycle, the ring has normal tension for reduced friction. (Most commonly used for drag race applications).

(LG) Lateral Gas Ports:

This process mills slots into the top of the top ring groove and provides a pathway for combustion pressure to get behind the top ring. This process helps to increase ring seal and is most common in circle track applications.

(UG) Ultra Groove:

Ultra Groove is a special ring groove machining process that provides near perfect groove flatness and surface finish. Tolerances are held to millionths of an inch.

(SB) Spin Boss and (WM) Window Milling:

In certain applications window milling will remove a significant amount of weight from the skirt of the piston while maintaining its strength and integrity. Spin Boss refers to machining on the bottom of the pin boss, which removes weight where it is not needed for strength.

(PB) Plunge Boss and (CB) Chamfer Pin Boss:

Machining process that removes additional material for added weight savings.

(CD) Contact Reduction Grooves:

The purpose of machining these grooves is to reduce the amount of contact area against the cylinder wall when the piston "rocks over". Contact reduction also serves to disrupt the flame travel into the crevice area thus helping to reduce detonation.

(AG) Accumulator Grooves:

An accumulator groove is machined into the land between the top and second ring. It provides additional volume where residual combustion gases that have "blown by" the top ring can collect. This additional volume helps to reduce pressure between the top & second ring, thus aiding in top ring seal and minimizing ring flutter.

(DP) Double Pin Oilers:

Double Pin Oilers deliver twice the amount of oil to the wrist pin as compared to the standard single pin oiler.

(PF) Pin Fitting:

The pin bore is precision honed to attain an exact pin clearance. Clearances typically range from .0003 to .0010 between the wrist pin and pin bore.

(NS) Oil Squirt Notch:

Notching can be done on pistons for motors with oil squirters, or to avoid contact between pistons and/or pistons and crankshaft.

(BO) Bottom Oilers:

This process machines one or two holes into the bottom of the pin boss to assist in splash pin lubrication.

(TV) Tulip Valve Pockets:

Most commonly used on Hemi and motorcycle engines, this process leaves a raised area on plunged valve pockets to achieve maximum compression.

JE PRO SEAL[®]

PISTON RINGS

Use the example below to determine the appropriate ring set part number for your application. Begin by selecting your desired ring type (Steel/Gas Nitrided, Steel Chrome Faced or Ductile Iron Moly Top ring) then select the appropriate axial ring heights from the ring chart for your piston (see figure 1). This will provide the base number as shown in the example. To the right of the base number on the ring chart, all bore sizes available for that type of ring are listed. If bore size is followed by a "-" and a number (oversize) the rings must be file fit to the finished bore size.

*No number or 0 means that ring set has been pre-gapped and usually does not require gapping. Be sure to always check if file fitting is required.

GAS NITRIDED RING SETS

Specially developed for use with either Nikasil and/or factory iron blocks and liners. Added tensile strength helps maintain conformity with the bore to improve ring to cylinder wall seal. Gas nitriding provides an extremely hard surface with a very low coefficient of friction that provides long life and more power.

Includes: Steel Gas Nitrided Top, Premium Iron 2nd, Low Tension Oil Ring

CUSTOM RING OPTIONS

JE Pro Seal's ring manufacturing capabilities can provide custom ring solutions to your specific high performance needs. Our Custom Ring Department is armed with the latest equipment for design, manufacture and analysis. JE Pro Seal offers custom back-cutting to any desired radial thickness, custom chamfering to convert any neutral ring into a torsional ring. JE Pro Seal can also manufacture custom Dykes rings, and machine special axial heights on any ring. If you can't find the ring you're looking for, give your JE sales representative a call.

ULTRA FINISH RINGS (UFR)

JE Pro Seal Ultra Finish Rings (UFR) are machined to the most exacting tolerances in the industry. All Ultra Finish rings are lapped to within $\pm .000050''$ axial height and precision turned to $\pm .0015''$ radial thickness. Designed to compliment our Ultra Groove® ring grooves available on JE custom pistons, these rings are used for the most demanding high performance applications that require extremely tight clearances for maximum seal. Featuring unprecedented flatness and axial surface finishes less than $4\mu\text{inRa}$, the Ultra Finish tolerance is available for all JE Pro Seal rings.

CRITICAL FINISH RINGS (CFR)

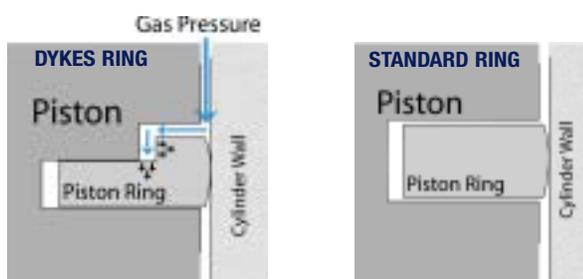

JE ProSeal Critical Finish Rings (CFR) present an alternative to Ultra Finish Rings with the same surface finish ($< 4\mu\text{Ra}$) on lapped top and bottom ring sides as the UFR held to within $\pm .00015''$ axial thickness.

CRITICAL TOLERANCE RINGS (CTR)

JE Pro Seal Critical Tolerance Rings (CTR) are held to $\pm .00015''$ axial height and an industry standard base metal surface finish ($< 25\mu\text{Ra}$). An alternative to our Critical Finish rings, JE Pro Seal CTR's are available in many of our most popular ring types. Call your JE Pro Seal sales representative for availability.

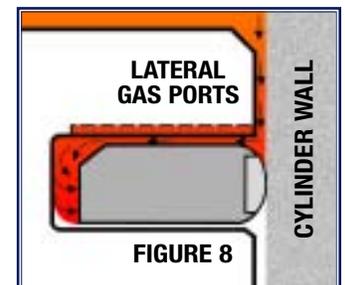

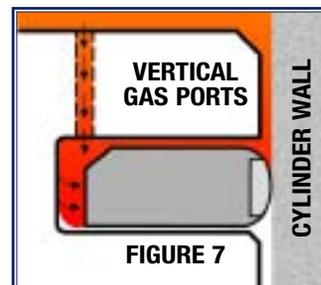

DYKES RINGS

If you want maximum ring seal for your drag racing application, talk to your JE salesman about Dykes Rings. On the power and compression strokes of your engine, the gas pressure loads the ring against the cylinder wall and the bottom of the ring groove to create a better seal for increased horsepower. On the remaining two strokes, the ring relaxes giving you the reduced pressure created by the ring's natural radial tension thus reducing frictional drag.

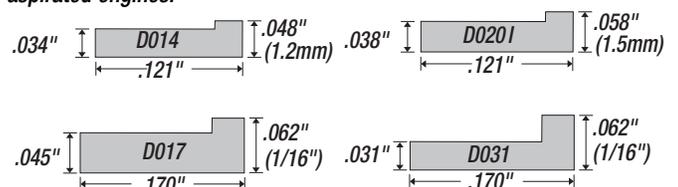

GAS PORTING

Combustion pressure can be directed behind the top ring with the addition of vertical or lateral gas ports on the piston. Vertical gas ports are small holes drilled into the top of the piston that lead to the back of the top ring land. These holes allow combustion pressure to enter the top ring land directly behind the ring on the combustion stroke forcing the ring face against the cylinder wall for maximum seal (fig. 7). Lateral gas ports perform the same function by providing a pathway for the combustion pressure to enter the ring land with less interference (fig. 8). Gas ports are extremely beneficial when using reduced radial width and low tension rings. They aid in ring seal on the combustion stroke while reducing friction and drag on the remaining strokes that can rob the engine of horsepower. As a general rule vertical gas ports are mainly used in drag race applications while lateral gas ports are used for circle track and endurance racing (vertical gas ports tend to plug with carbon more than lateral gas ports and are usually application specific).

The four most common types of Dyke cut top rings are the D017, the D031, the D014 and the D0201. All D017 and D031 rings have an axial height of $1/16''$. The D014 and the D0201 are metric rings and have axial heights of 1.2mm and 1.5mm respectively. Both the D017 and the D014 are for use on forced induction and nitrous applications. Although the D0201 can be used on forced induction engines as well, it is generally used on naturally aspirated engines. The D031 ring is for use only on naturally aspirated engines.

WRISTPINS

WRIST PIN INSPECTION

JE uses the most advanced technology to detect even the tiniest flaws in the pin and/or the pin coating. The extensive quality control process that JE performs ensures that the pins you receive from JE are the finest in the industry. JE uses a wide variety of laboratory grade inspection equipment like the Zeiss 1000x microscope and the Taylor Hobson Profilometer shown here.

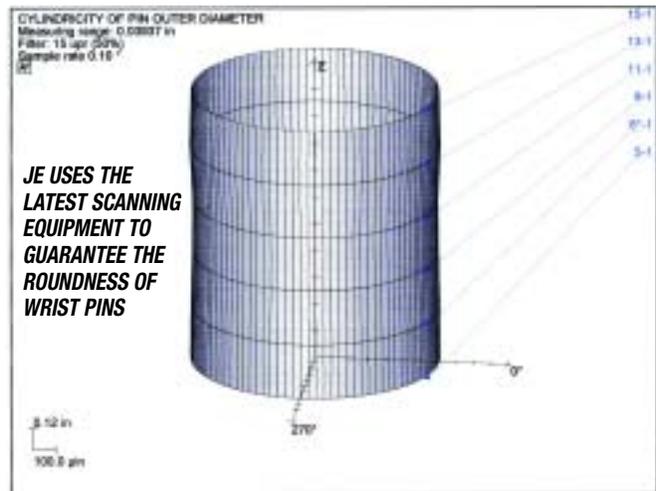

WRIST PIN FINISH

All JE series 52, 64, 72, 93, 94, 95 pins are *superfinished* on both outside and inside diameters. The outside finish helps to reduce piston pin bore wear and to distribute loads more evenly over the entire piston pin boss area. The inside finish is extremely important and helps to minimize fatigue cracking thereby contributing to the overall strength and reliability of the pin.

DLC (DIAMOND LIKE CARBON)

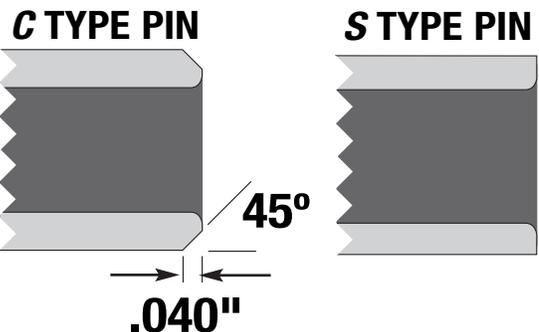

DLC (Diamond Like Carbon) is an extremely hard, wear resistant coating with a very low friction coefficient of 0.1-0.2. Excellent adhesion to steel and Titanium is achieved via a plasma assisted chemical vapor deposition (PACVD) process. The wear resistance and non-stick performance of DLC make it an excellent addition to wrist pins for the prevention of pin bore galling.

DLC COATED WRIST PIN

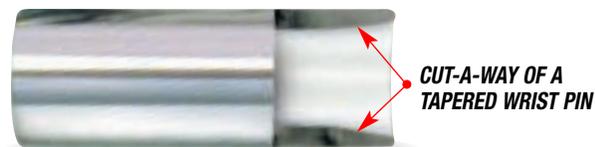

LOCK TYPES C OR S

C stands for chamfered, all pin part numbers that end with C have a 45° chamfer on the ends of the pin and are designed to be used with wire locks only. It is important to note that JE C type pins have a deeper chamfer (.040" as shown) than many other manufacturers. S type wrist pins have a sharp edge and are designed for use with Spiro and Tru Arc type locks.

TAPERED PINS

Tapered wall pins are designed for the highest strength to weight ratio possible with the length of the taper has been optimized for the piston pin boss span. JE tapered wall pins are hand lapped to the finest I.D. finish available in the industry.

HOW TO

Convert from Cubic Centimeters to Cubic Inches

Multiply by **.0610237**

Example **1835cc x .0610237= 111.98**

Convert from Cubic Inches to Cubic Centimeters

Multiply by **16.387064**

Example **350ch x 16.387064= 5735.47**

Convert from Inches to Millimeters

Multiply by **25.4**

Example **3.189 x 25.4= 81.00mm**

Convert from Millimeters to Inches

Multiply by **.0393701**

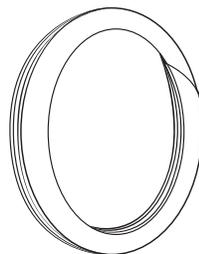

Example **81mm x .0393701= 3.1889**

INSTALLING WIRE LOCKS

Install the end of one lock at 90 degrees from the pick lock groove. Use a stiff small bladed screwdriver and insert the tip into the pick lock groove while you wedge the lock into the groove without kinking or deforming the lock. After the first lock is in place, seat the lock by solidly hitting the wrist pin with a brass drift pin. Now install the connecting rod and the second lock. Seat the 2nd lock in the same manner as the first. Just as a precaution, we recommend hitting each side of the wrist pin with the brass drift pin an additional time. Perform these functions on a cloth towel or soft rubber pad so no damage to the piston occurs.

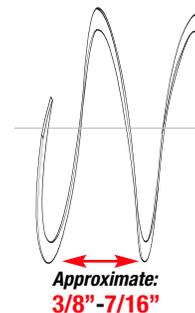

INSTALLING SPIRO LOCKS

For installing Spiro locks, grip each end of the lock and pull apart (approx. 3/8"-7/16"). The lock will resemble a small coil (fig. 5). The lock can then be spiraled into place almost as if you were screwing them into a groove (fig. 6). When the locks are properly seated, only half of the lock will be visible above the groove. Most SRP Pistons that require spiral locks will need 4 locks per piston, two at each end of the pin. **WARNING: It is important that the correct numbers of locks are installed in each piston or severe engine damage may occur. WARNING: Do not over stretch spiro locks and do not reuse spiro locks!**

Not to Scale!
