## Design

In addition to accumulate know-how, as a clutch specialist, the latest CAE equipment has been introduced. By utilizing Pro-Engineer (3D design) and FEM (Finite Element Analysis) engineering, the most appropriate design and configurations are tailored to meet each customer's individual requirements. Diaphragm springs, a key component of the clutch assembly, are also designed and made by ZF Sachs to realize ultimate performance.

## Bench Test

Various test benches have been developed by ZF Sachs. Tests far to be conducted in a vehicle are reproduced on these test benches with the reliability of products being evaluated.

## Attestation

International standard of Quality Management, ZF Sachs Race Engineering GmbH had obtained the quality rating ISO9001:2000 encompassing plants and products in 1998, which shows the superiority of ZF Sachs Race Engineering quality control system.

## Inspection

The Performance Clutch PCS of ZF Sachs Race Engineering GmbH Performance Clutches are assembled by hand with the finished products being individually assessed for clamping load and release characteristics ensuring high quality at all times.

## 2. Eigenschaften und Einsatzgebiete von Performance Kupplungen PCS / Characteristics and applications of Performance clutches PCS

Der wesentliche Vorteil einer Performance Kupplung, im Vergleich zur Serienkupplung, besteht in der längeren Lebensdauer und der thermisch höheren Belastbarkeit.

Bei organischen Kupplungsscheiben ergibt sich eine höhere Burstgrenze, da die Beläge geklebt und / oder vernietet werden.

Bei Sinterscheiben liegt der Reibwert der Beläge noch höher, wodurch sich ein höheres übertragbares Drehmoment ergibt. Sinterscheiben sind unempfindlicher gegen Schmutz.

Auf Grund verstärkter Kupplungskomponenten kann sich die Pedalkraft erhöhen und der Modulationsbereich am Kupplungspedal verringern. Ferner können Kupplungs- bzw. Getriebegeräusche auftreten.

The fundamental advantage of performance clutches compared with OE clutches results in a higher life span and in a superior thermal resistance.

Discs with organic friction material have a superior burst limit because of pasting and riveting the clutch plates.

The friction coefficient of the sintered metal plates is very high which leads to a higher convertible torque.

Due to the reinforced clutch components, the pedal force can increase and the modulation range can be reduced. Additional clutch and gear noises can appear.
