ABOUT

TOKICO Performance Shocks has three locations in the United States. In Berea, KY, TOKICO has a factory which produces original equipment parts (OEM) for auto manufacturers. The office for original equipment sales and engineering is located in Allen Park, MI. TOKICO aftermarket sales and inventory are located in Compton, CA. Both shock absorbers and brake hydraulics are sold from this location.

TOKICO Performance Shocks has been manufacturing shock absorbers, brake parts and other hydraulics for over 65 years. The company has been and continues to be a major original equipment supplier to a variety of auto manufacturers. Responding to auto manufacturers' demands for a shock that could provide both good stability and good ride quality, TOKICO developed the twin-tube low-pressure gas shock absorber. TOKICO began working on this technology in the mid 1970's. Since then much of that technology has been adopted world-wide.

The first U.S. built vehicle using twin-tube low-pressure gas shock absorbers was the 1982 Lincoln Continental. Those shocks and struts were designed and supplied by TOKICO, a long time leader in electronic shock absorbers and suspension products.

Gas-pressurized shock absorbers have been available for over 30 years. Like non-pressurized shocks they use oil as a damping medium. Sometimes you may see the term gas-filled but this is misleading. Gas-filled struts are a form of spring like those used for hoods, hatches and truck lids.

In gas pressurized shocks, the oil is pressurized to minimize the negative effects of foaming or cavitation. Oil has some gas or air bound up in solution. When the shock piston moves through the oil there is a pressure drop behind the piston and the air comes out of solution and forms foamed oil. For maximum performance and efficiency the shock piston must work in clear oil.

There are two types of gas-pressurized shocks, monotube high-pressure and twin-tube low-pressure. Generally a twin-tube low-pressure shock will provide a better ride for a given level of control than a monotube high-pressure shock.

HP Series

TOKICO's HP Series - the famous "Blue Shock" - continues to be the overwhelming choice of performance enthusiasts looking for the best in overall handling and ride quality. The HP Series damping typifies TOKICO's valving flexibility and philosophy by minimizing low speed damping force and greatly increasing damping at medium and high piston speeds for improved compliance, tire adhesion and handling.

TOKICO Performance shock absorbers have a number of features not found in other shock absorbers. These features allow TOKICO shock absorbers to provide a superior combination of handling, stability and ride quality. Piston Rod Guide with Teflon® coated bushing for minimal dynamic friction and good piston-rod life. Hardened, chrome-plated, and micro-polished piston-rod for long seal life and smooth operation. Twice drawn over mandrel pressure tube, concentricity provides good sealing and minimal dynamic friction (drag). The heart of TOKICO's shock absorber is their unique piston design. The multi-stage variable aperture sandwich valve system with its precision plates and precise orifice control, allows a flexibility of damping control not found in other shocks. The oil is specially compounded for resistance to breakdown and minimal viscosity change regardless of temperature.

Shocks come in a variety of configurations and the different TOKICO designs are shown here. TOKICO's blue HP Series non-adjustable performance shocks and struts offer superior performance and traction with ride quality that's equal or superior to the original ride.

◀ Conventional shocks are the simplest design. They're common on trucks, older cars and a few newer cars.

▶ Struts are shocks that allow auto manufacturers to eliminate the upper control arm and ball joint. With a large diameter piston rod for side load, struts are larger and heavier than conventional shocks. Most struts also combine the lower spring seat into their construction.

◀ Strut cartridges are replacements for rebuildable struts. While they're still used, most newer cars use sealed or non-rebuildable struts.

▶ Spring seat, coil over and coil around are terms used to describe this shock. While they look like struts, they're actually shocks with spring seats mounted on the body. They're not only smaller overall compared to struts, but their piston rods are 25% to 60% smaller.

Illumina Adjuster
PART # TO 00102

With a choice of 5 settings from the softest (#1) to maximum control (#5) the Illumina Series allows drivers to easily change the balance, overall handling, or ride quality for everything from daily driving to autocross or even drag racing with a simple turn of the adjuster at the stem top.

ILLUMINA

For the serious enthusiast, TOKICO offers five-position adjustable Illumina Series shocks and struts. Its sophisticated adjustment system was designed for tuning street suspensions, so you have the ability to set up your car's handling for a variety of driving environments.

Using TOKICO's Illumina Adjuster, a simple click indicates your change to ride or handling balance. So whether you're going to the track, or simply cruising, the Illumina's adjustment range adapts to your needs.

Illumina even works on the race track. Steeda, a nationally known Mustang tuner, uses Illumina struts and shocks on their road race and drag race cars. The Illumina units not only perform well, but Steeda is impressed with their durability.

Internally, Illumina uses TOKICO's sophisticated multi-stage, variable-aperture piston and valve system combined with a five-position bypass shutter-valve.

This valve system allows simultaneous rebound and compression damping adjustment.

A shutter-valve detent permits making easy adjustments, so that you can make quick changes and still know which setting you've chosen.

D-SPEC Series

D-Spec Wide Extra Range Adjustable Shocks

TOKICO's D-Spec Series adjustable shock is a multi-use product that's the result of sophisticated piston and valving design. In addition, it utilizes a unique variable-aperture bypass, which is controlled by an adjustable slide valve.

D-Spec (damping specific) adjustments change both rebound and compression damping simultaneously. Between maximum soft and hard settings, the D-Spec is infinitely adjustable. For more information and to view the damping graph full size. Visit www.tokicogasshocks.com

D-Spec shocks and struts are sold individually or in sets of four. Each set includes an adjustable tool, and a manual explaining the adjustment process as well as covering suspension tuning tips. The adjuster may also be purchased separately.

D-Spec suspension kits include four D-Spec shocks/struts and four sport lowering springs. The kits will use the prefix DSK in the part number.

*Caution – racing on the street is illegal and dangerous. Racing should only be done in properly organized and sanctioned events.

D-Spec Adjuster
PART # TO 00101

D-Spec/HTS Adjustment Extensions

Flexible 8" extension features Braided Stainless Steel cover, knurled and anodized adjuster knob with etched markings. Great for hard to reach rear shocks like G-35, 350Z, Mustang and D-Spec and HTS applications. Sold in pairs.

PART # TO 00100

HTS Series

Have you been searching for a shock that does it all? Are you looking for a shock that can handle the rigors of auto crossing, road racing and drifting? Then look no further than Tokico's HTS line. With a large range of adjustability combined with affordable pricing the Tokico HTS line is sure to fit your performance budget.

TOKICO HTS Dampers have been developed with an entirely different concept than traditional adjustable gas shocks. Instead of a shock that would be adjusted to "hard" on the track and "soft" on the street, the HTS Damper was developed to allow users to set up their suspensions to "move" the way they want, all the way from smooth, comfortable ride quality to race-ready setups for clocking record lap times. The HTS Damper gives users a huge range of adjustability and performance for all users and can be considered the ultimate street damper.

TREKMASTER

- Superior Traction**
- Superior Stability**
- Superior Ride**
- On and Off Pavement**

TOKICO's TREKMASTER shocks use the latest technology to attack the problems of proper damping control on trucks and SUVs. The sophisticated oil-flow management system offers:

- Reduced body roll
- Improved steering response
- Minimal dive and squat
- Reduced wander due to side winds
- Better cornering
- Reduced suspension bottoming
- Better braking
- Improved ride quality

The TREKMASTER Series combines TOKICO's multi-stage variable-aperture piston and sandwich valve system, with a new base valve design that provides a four-stage dual blow-off compression cycle. What all of that means is, the TREKMASTER provides a level of handling, traction, and ride quality unmatched by other shocks. In addition to the very sophisticated damping system, TREKMASTER shocks feature a low mechanical drag rod guide and piston seal design. The result is up to 65 percent less mechanical drag compared to other shocks. Smooth operation and long life are the benefits.

The TREKMASTER uses enough compression damping to keep the tires on the road, but not so much that traction and ride quality suffer. The result – good adhesion and low impact harshness for better ride quality.

RAK Series

FOR HONDA/ACURA

SUSPENSION KITS

Threaded Body Ride Height Adjustable Coil Over Kit allows 1/2" to 3" adjustment from stock ride height, utilizing the D-Spec/HTS or Illumina shocks/struts. Featuring nickel-plated steel spring seats, hi-tensile chrome silicon springs specifically designed for proper rate and preload, shortened shock body and damping characteristics for maximum travel and control.

Available with infinitely Adjustable D-Spec Dampers or 5-Way Adjustable Illumina Dampers. Proper lowering improves handling, looks and driving enjoyment.

NOTE: Excessive lowering reduces ground clearance and suspension travel. It can cause problems including:

- Stress cracks in the body or chassis
- Damaged suspension parts, including shocks
- Poor handling and braking through reduced tire adhesion
- Severe tire wear
- A harsh ride

ADVANCED HANDLING SUSPENSION KITS

Vehicle specific matched spring rates and proper ride height insure correct fit and function - taking the guesswork out of choosing the right suspension combination. TOKICO's performance lowering springs are manufactured with chrome silicone spring alloy, are heat treated, shot peened, block set, phosphate treated, powder coated and carry the TOKICO logo and Limited Lifetime Warranty. Vehicle ride height is lowered .05" to 1.75" from the stock ride height.

TOKICO Advanced Handling Suspension Kits improve handling and vehicle appearance.

The kits combine either the performance HP Series non-adjustable shocks/struts, or the five-position adjustable Illumina Series shocks/struts with a matched set of performance lowering springs.

Manufactured from the finest alloy spring steel, TOKICO springs are engineered to provide excellent handling without compromising ride quality.

Using higher rate sport-springs, in combination with worn or weak shocks or struts, can cause handling and vehicle control problems. For more information see Evaluating Your Shocks at www.tokicogasshocks.com.

Caution: Excessive lowering can damage your car and void your shock warranty.

TOKICO STRUT MOUNTS AND BOOTS

Manufactured to meet or exceed original equipment specifications, new TOKICO strut mounts and boots enhance the safety, performance and appearance of your vehicle. Strut mounts play a key role in your vehicle's handling, ride control, braking, alignment and steering. For a professional strut installation, make sure to replace damaged strut mounts and boots.

TECH NOTES:

- Requires re-installation of factory Safety Washer
- Requires 2 Lower Control Arm Spacers
- one on each side of control arm (96-00 Civic)
- Enlarge Lower Control Arm mounting hole if required
- Do NOT trim Bump Stop when lowering vehicle
- Shocks will override manufacturer's adjustable suspension function

TECH NOTES:

- Requires re-installation of factory Safety Washer
- Requires 2 Lower Control Arm Spacers
- one on each side of control arm (96-00 Civic)
- Enlarge Lower Control Arm mounting hole if required
- Do NOT trim Bump Stop when lowering vehicle
- Shocks will override manufacturer's adjustable suspension function

TREKMASTER

LIGHT TRUCK/SUV

Superior Traction
Superior Stability
Superior Ride
On and Off Pavement

TOKICO's TREKMASTER shocks use the latest technology to attack the problems of proper damping control on trucks and SUVs. The sophisticated oil-flow management system offers:

- Reduced body roll
- Improved steering response
- Minimal dive and squat
- Reduced wander due to side winds
- Better cornering
- Reduced suspension bottoming
- Better braking
- Improved ride quality

Color may change. Call for details. One size fits all.

LIMITED WARRANTY

1. TOKICO Limited Lifetime Warranty. TOKICO warrants its performance shock absorbers and struts to the original retail purchaser against defects in material and workmanship when used on private passenger cars and light trucks under normal operating conditions for as long as such purchaser owns the vehicle on which it was originally installed, on a pro-rated schedule.
2. Exclusions from Warranty Coverage. Competition-style coilovers, racing shocks/struts and lowering springs do not carry a lifetime warranty. The warranty does not apply outside of the United States and Canada or to any units which (1) have been improperly installed or installed on vehicles for which they were not designed, (2) have been modified, altered or subject to misuse, negligence or accident with the vehicle on which installed, (3) are operated commercially, off- the-highway or for racing, (4) installed on excessively lowered vehicles.
3. TOKICO Warranty Obligation. TOKICO's obligation under this warranty is limited to the replacement of the defective product covered by this warranty. TOKICO has no obligation to bear any costs of removal or installation and will not be liable for any special, incidental or consequential damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply.
4. Warranty Claim Procedures. To make a claim under this warranty, return the defective unit, with a photocopy of your invoice, to any dealer participating in TOKICO's warranty program for verification of warranty coverage and exchange for a new unit. Any return must be accompanied by a return goods authorization form and a statement containing the claimant's name, address, telephone number, date of purchase of the product, description of defect, and make and model on which the unit was used on. TOKICO will, upon verification of warranty coverage, within 30 days after TOKICO's receipt, send a new unit in exchange for the returned unit, and refund the cost of shipping the unit to TOKICO if shipped using regular ground services.

Returns or warranty related inquiries to TOKICO should be addressed to HITACHI Automotive Products, TOKICO Performance Shocks, 550 West Artesia Blvd. Compton California, 90220. Phone 310-357-2201

5. Rights of Purchase. This warranty gives the purchaser specific legal rights and there may be other rights which vary from state to state.
