TOP TECHNOLOGY

SPARCO RACEWEAR: THE NUMBER ONE CHOICE FOR RACING TEAMS IN EVERY MAJOR CHAMPIONSHIP AROUND THE WORLD.

WORLD LEADER.

Sparco has become the world leader in the production of fireproof clothing for racing drivers thanks to the quality and style of its designs and the comfort and durability of its products. A SPARCO suit is always smart, even after years of wear and washing. SPARCO is always recognized as a quality product.

SPARCO CLIENTS.

SPARCO products are used by the majority of the world's top drivers and race teams. Drivers such as Hakkinen, Montoya, Villeneuve, Labonte, Gordon and many more rely upon SPARCO to provide the highest levels of comfort and safety, in the most demanding environments.

MEETING THE SAFETY REGULATIONS.

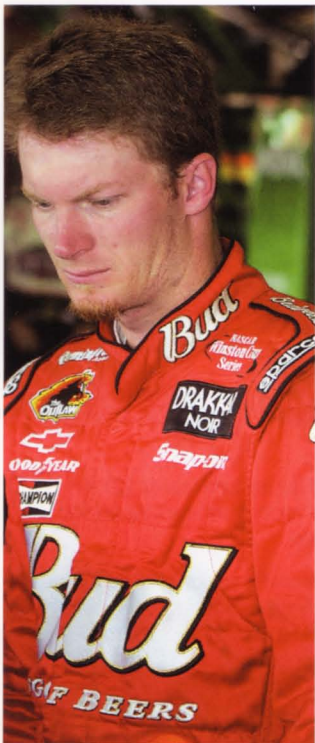

Sparco fireproof clothing conforms to the severe FIA and SFI regulations. Exclusive and technologically advanced materials guarantee that SPARCO driving suits are the lightest and most sophisticated suits available today. Our in-house testing laboratory and R&D department ensures that all SPARCO products are state-of-the-art.

PRODUCTION EQUIPMENT.

In the Sparco workshop more than 50 skilled workers operate the technologically advanced equipment needed to produce a race suit. This sophisticated equipment and almost fanatical attention to detail allows Sparco to guarantee control over the product and to reach a standard of quality that few can hope to emulate. With over 120 embroidery machines and the latest generation of computer technology SPARCO is capable of manufacturing the most sophisticated custom suit designs.

SPARCO' INNOVATIVE X-LIGHT RANGE.

Sparco is proud to present the new X-Light range of products. Designed with exclusive continuity in mind, each of these items has been specifically engineered and tested to be the premier product in its category. In the range you will find the new X-Light suit, X-Light-K Karting suit, X-Light shoes, S-Light seats and the X-Light Harness system. Our teams of designers are constantly at work developing higher levels of safety, style and comfort. Our desire and dedication to being the foremost leader in the motor sports safety field has led to the development of these exceptional products.

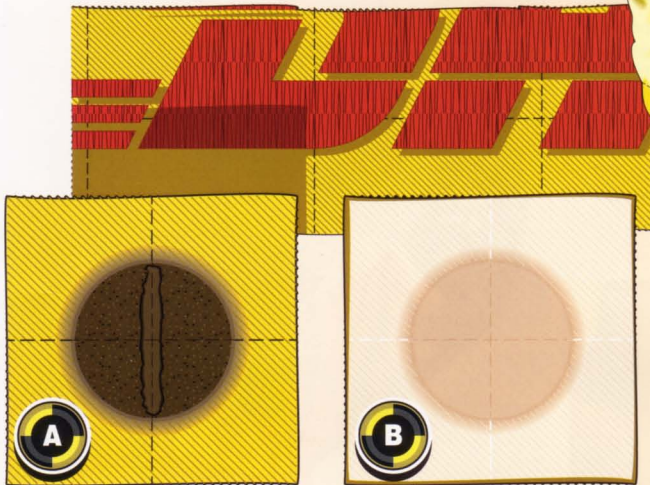

SAFETY...

One of the prime safety concerns in auto racing is protecting drivers and race personnel from the dangers of fire. Incidents in recent years, serve to remind everyone involved that no matter what precautions are taken, the dangers of fire can never be fully eliminated.

Every precaution is taken to maximise protection. The colorful clothing seen in pit lane is the product of extensive research and development.

Material facts: Driver and pit-crew suits are tailored exclusively from lightweight woven Nomex fibers. Embroidered logos are stitched with Nomex thread on the outer layer only, to preserve suit integrity. In a fire cotton, thread can ignite and act as a heat conductor.

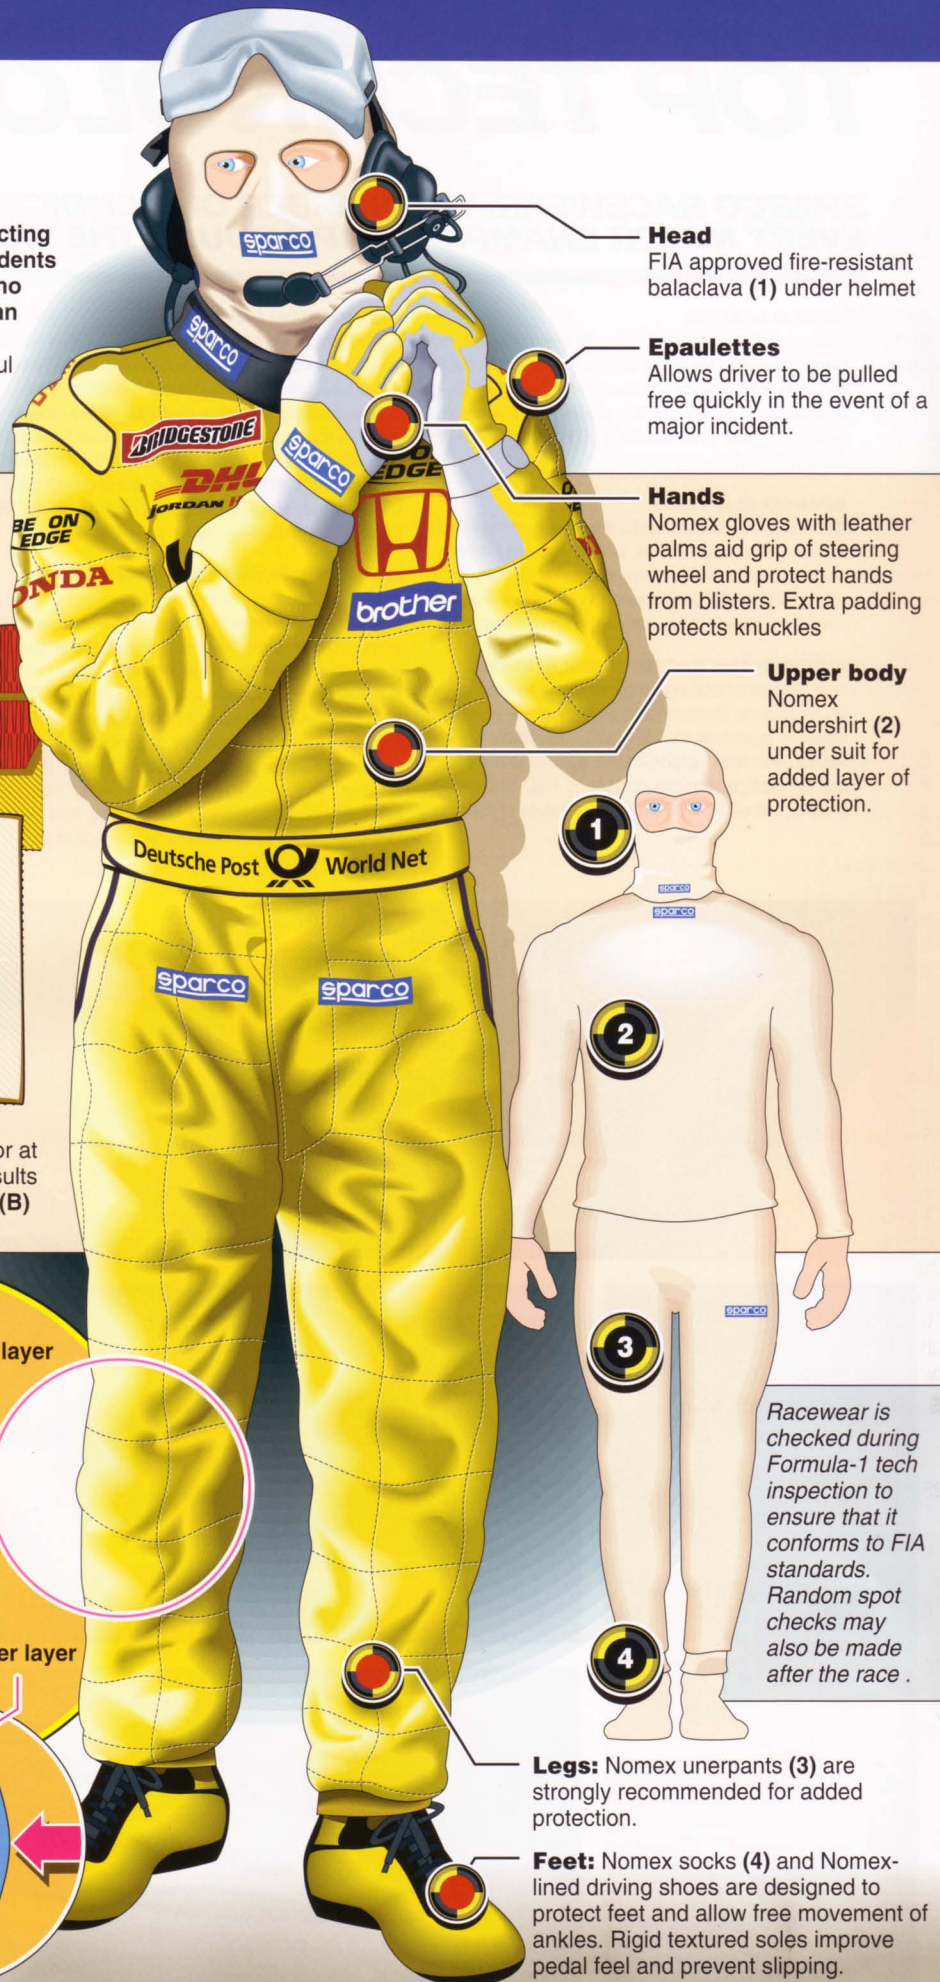

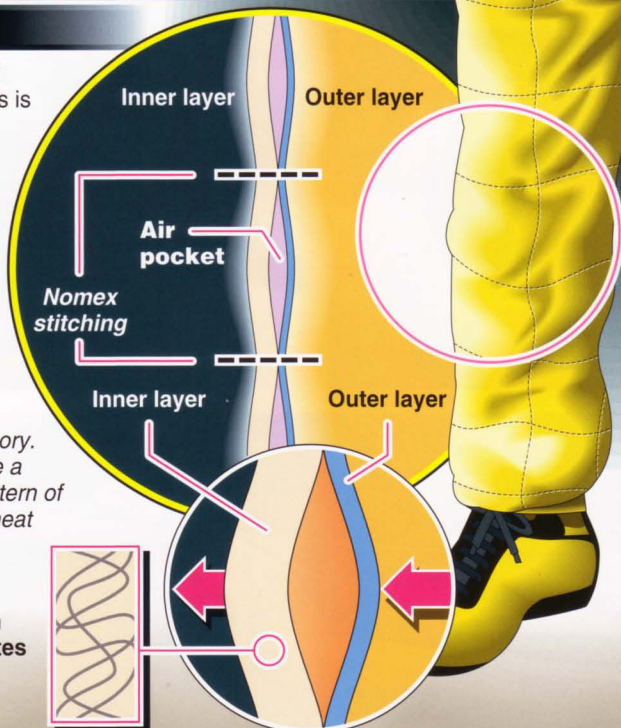

Evidence of heat: In a controlled test, an 800BC liquid propane flame is blasted on to a section of driver's overalls for at least 12 seconds (time specified by FIA regulations). This results in severe burning to the outer layer (A), while the inner layer (B) sustains only moderate signs of thermal heat transfer.

Air dynamics

The box-quoted Nomex stitching on Sparco suits is more than just a nice pattern! Stitching the layers together in this way creates hundreds of small air pockets. Because heat transfer through air is much slower than by direct contact, each pocket dramatically slows the effects of external fire.

A simple test of this theory. Next time you barbecue a steak, check for the pattern of the grill burnt into the meat where there has been direct contact!

Corrugated sandwich weave of Nomex creates millions of tiny air pockets

Head
FIA approved fire-resistant balaclava (1) under helmet

Epaulettes
Allows driver to be pulled free quickly in the event of a major incident.

Hands
Nomex gloves with leather palms aid grip of steering wheel and protect hands from blisters. Extra padding protects knuckles

Upper body
Nomex undershirt (2) under suit for added layer of protection.

Racewear is checked during Formula-1 tech inspection to ensure that it conforms to FIA standards. Random spot checks may also be made after the race.

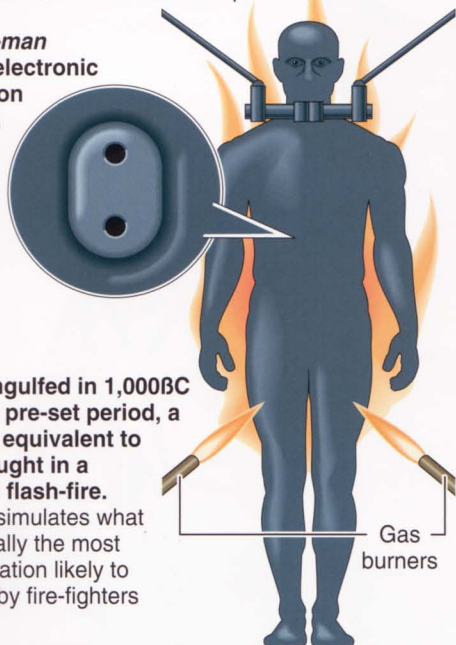

Legs: Nomex unpants (3) are strongly recommended for added protection.

Feet: Nomex socks (4) and Nomex-lined driving shoes are designed to protect feet and allow free movement of ankles. Rigid textured soles improve pedal feel and prevent slipping.

THE BURNING ISSUE.

Introducing...Thermo-man: Du Pont, the manufacturers of Nomex, carry out exhaustive tests on suits whether for F1 drivers or fire-fighters using a life-sized manequin, equipped with computer-linked sensors. The analyzed test data from *Thermo-man* is used to calculate simulated burn patterns

Thermo-man has 120 electronic sensors on his head, torso, arms and legs

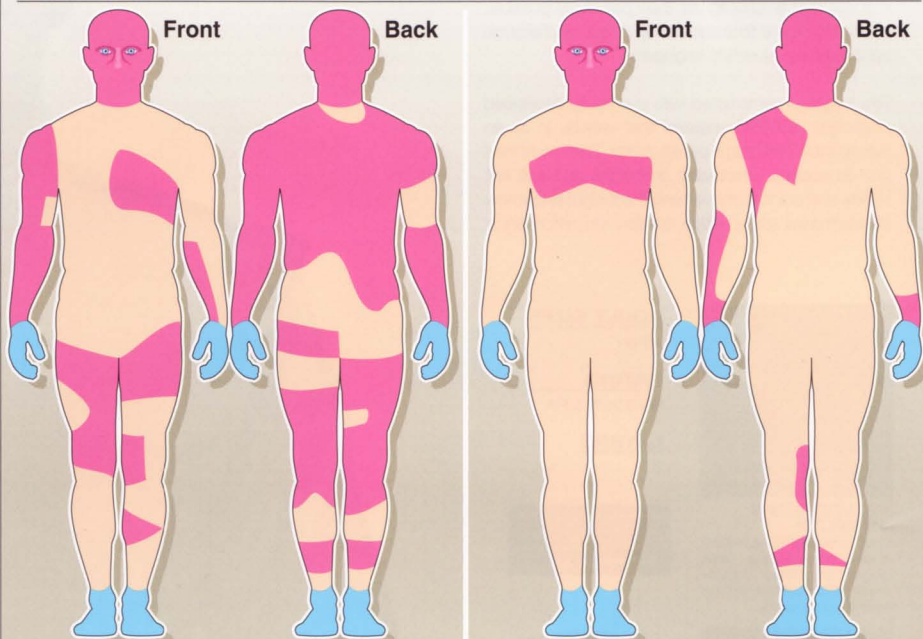

Suit is engulfed in 1,000°C flame for pre-set period, a scenario equivalent to being caught in a chemical flash-fire. This test simulates what is potentially the most lethal situation likely to be faced by fire-fighters

Unharmd 2nd and 3rd degree burns Unharmd

The figures below illustrate average results of comparisons between fire-proof cotton and Nomex body coverings, illustrating the heat restraining properties of F1 drivers clothing. Nomex's stability in intense heat prevents shrinking on to the body, which accelerates heat transfer. The cotton's fire-proofing may also generate toxic fumes when fabric ignites

Fire-proof cotton vest and leggings

Nomex vest and leggings

Test time: 4.5 seconds / Burns: 58%

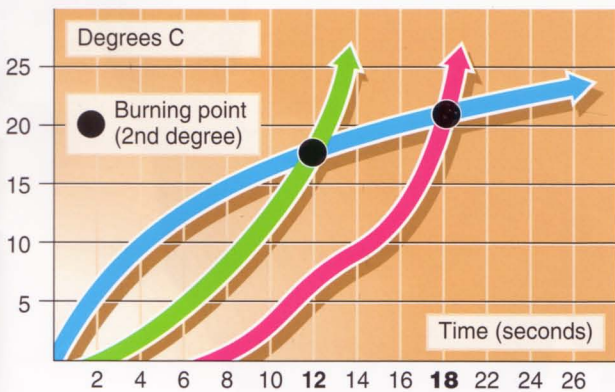

Test time: 8.0 seconds / Burns: 18%

Nomex is the registered trade-mark of DuPont

Fire insurance: Regulations surrounding driver safety are rigid and precise. Before a driver is granted a Super Licence permitting participation in F1 he must satisfy certain criteria. One of these is that in full racewear, with seat-belts properly secured and padding in place, he must be able to evacuate the cockpit and place one foot on the ground within five seconds.

Rules on clothing demand that overalls and underwear should protect a driver from second degree burns for at least twelve seconds.

Scale of protection...

Crew cuts: Pit stop crews are essentially protected by the same clothing as drivers. The key exception is in headwear, where many crews opt for just wearing balaclavas. These have double eye-holes and are formed of a two-layer Nomex front, with a single layer back.

The weak link... Protective goggles now carry a layer of transparent film to reflect heat in the event of fire but, while saving eyes from dirt and splashes, they cannot offer the same high levels of protection as the clothing. In past fires, the goggles have been the weakest point of protection from heat and fire.

Pit crews wear the same lightweight Nomex suits as drivers (around 4.5lbs)

X-LIGHT 300

Once again, setting
THE STANDARD
in safety and technology.

A technological milestone, the X-Light is the lightest most comfortable 3-layer racing suit in the world. This latest achievement in fabric technology has resulted in a suit that is 25% lighter than previously possible, while at the same time surpassing all tests and analysis performed by our safety engineers.

The X-light is constructed with our newly developed multi-layer NOMEX® material that weighs in at an unbelievable 298 grams per sq. meter. That, combined with its superior breathable properties and soft knit inserts at all points of movement, the X-Light sets a new standard in suit safety, design, comfort and performance.

INDEPENDENT MOBILITY

360° articulating NOMEX® shoulder gussets add uncompromised movement plus added airflow to the upper body.

STRETCH PANELS
NOMEX® stretch panel incorporated into the lower back of the suit allows maximum flexibility and range of movement.

SERGED SEAMS
Concealed pockets and special "Serged" seam construction is used for added safety, strength and comfort.

TECH 5

The evolution of OVER 25 YEARS of suit making experience.

The most advanced and state-of-the-art racing suit ever produced by Sparco. Designed for the driver that will not accept any compromise when it comes to safety, comfort, and style. The Tech 5 is constructed of a new evolution NOMEX® III inner layer fabric. This revolutionary fabric was developed to decrease the overall weight of your suit, raising the level of comfort drivers experience over the course of a race. By using our newest and most technologically superior inner liner, Sparco has reduced the overall weight of the Tech 5 suit by 30% over our already light weight standard NOMEX® III racing suits.

ULTRA SOFT COLLAR

Ultra Soft NOMEX® inner liner combined with Sparco's exclusive NOMEX® III outer shell provides maximum comfort with high durability.

STRETCH PANELS

NOMEX® stretch panel incorporated into the lower back of the suit allows maximum flexibility and range of movement.

INDEPENDENT MOBILITY

360° articulating NOMEX® shoulder gussets add uncompromised movement plus added airflow to the upper body.

SERGED SEAMS

Concealed pockets and special "Serged" seam construction is used for added safety, strength and comfort.

TECH 5 EPAULETTES

Double stitched for added strength in the event an emergency extraction is required. On the Tech 5 the epaulette has been modified into an "L" shape, which creates less pressure on the back & shoulder when strapped tightly into the seat.

PRO-DRIVER

The suit with
INCREASED COMFORT
through freedom of movement.

The incredible comfort of a stretch Nomex fabric is now a technical reality. In the past, racing suits made with stretchable fabric have been extremely heavy, bulky and have lost their shape over time, until now! Finally a suit that incorporates the perfect combination of traditional NOMEX® III with our new Stretch NOMEX® strategically placed throughout the suit.

Our new Pro-Driver suit offers increased flexibility which gives you the extra freedom of movement you desire in a suit that is lightweight and durable.

STRETCH PANELS
NOMEX® stretch panel incorporated into the lower back of the suit allows maximum flexibility and range of movement.

SERGED SEAMS
Concealed pockets and special "Serged" seam construction is used for added safety, strength and comfort.

BOX QUILTING
Developed for our professional suits, box quilting creates hundreds of small pockets of air in the suit. This design aids in heat dissipation and ultimate comfort.

TOP 5

The 2 color version of the **EXTREMELY POPULAR** Prima 5 suit.

Prima translates to "Best" in Italian. The Top 5 is the number one choice for professional drivers in all forms of racing. From Formula One, NASCAR, CART, and IRL, the Top 5 has become the only choice for protection and comfort. Sparco Master Certified Safety Engineers have analyzed hundreds of pages of driver feedback to develop the Top 5 suit. The Top 5 line of suits is a signature of Sparco safety, comfort, functionality and appearance.

ULTRA SOFT COLLAR

Ultra Soft NOMEX® inner liner combined with Sparco's exclusive NOMEX® III outer shell provides maximum comfort with high durability.

SERGED SEAMS

Concealed pockets and special "Serged" seam construction is used for added safety, strength and comfort.

SUPER SPEEDWAY

Sparco's LATEST EVOLUTION of the Top 5.

The Super Speedway is a direct result of feedback from some of the top teams in Stock Car and circle track racing. Made with the exact same design and construction as the Top 5 suit, it has the added features of straight pant legs and split collar. All features listed below come standard on the Super Speedway suit. The Super Speedway is available in 3 color combinations and 8 off-the-shelf sizes.

FRONT SPLIT COLLAR

A special inner layer of NOMEX® has been used in the collar to help keep it supported and in the upright position at all times. This special fabric helps to assure you that the collar maintains the proper integrity to protect your neck from heat.

PRO CUP 2

The Pro Cup suit with NEW FEATURES for 2005.

Added for 2005: the 360 degree shoulder gussets. Based upon Sparco's collaboration with the top drivers in NASCAR, the Pro-Cup 2 suit is a light 2-layer box quilted Nomex III suit. This suit is lightweight, very durable, and its straight leg cuff and open style collar, make this the most widely used Sparco suit by stock car and circle track drivers throughout the country.

SPONSOR 5

The 2 COLOR VERSION of the Sparco 5.

The classic Sparco suit design which revolutionized the racing world when it was introduced in Formula One. The Sponsor 5 comes in Blue and White with a Red stripe. The Sponsor 5 suit is perfect for the racer who seeks style and comfort. Due to the two-layer construction of the Sponsor 5 the overall weight of the suit is dramatically reduced while still exceeding FIA and SFI 3.2a/5 standards.

INSULATED COLLAR
A special inner layer of NOMEX® has been used in the collar to help keep it supported and in the upright position at all times. This special fabric helps to assure you that the collar maintains the proper integrity to protect your neck from heat.

SPARCO 5

Set THE STANDARD in suit design.

The Sparco 5 has been the best selling suit over the past 10 years. It's two layer construction offers a light-weight, comfortable suit while still meeting strict FIA and SFI 3.2a/5 safety regulations. The suit meets these regulations due to the exclusive Sparco techniques used for the knitted lining, which offers constant and optimal thermal protection properties.

INSULATED COLLAR
A special inner layer of NOMEX® has been used in the collar to help keep it supported and in the upright position at all times. This special fabric helps to assure you that the collar maintains the proper integrity to protect your neck from heat.

CARMYTH

CARMYTH FABRIC: A GROUND-BREAKING NEW TECHNICAL MATERIAL.

Newly developed in the Sparco laboratories the Carmyth fabric is a mix of meta-aramydic and para-aramydic fibers. Carmyth fabric has a higher flame resistance than any previous material used in the manufacturing of race wear. Test results have been extraordinary: Carmyth has surpassed FIA standards with a fabric weight lighter than all other previous materials. Carmyth is also extremely soft and has an excellent wicking property which keeps you safe, cool and comfortable under the most severe conditions.

SPARCO HELMETS

Sparco products have been keeping racers safe for 25 years.

Sparco engineers have now developed a helmet that continues that long-standing tradition of excellence. After studying the needs of the racer and through extensive scientific research and testing, the new WTT line of helmets was created. In order to define a standard combining aerodynamic efficiency with the highest level of safety, we turned to the Fiat Research Center in Torino, Italy, one of the most advanced automotive research centers in the world. Their many years of aerodynamic testing experience include automotive components, racing cars, trains and much more.

The two main objectives of the research were:

1. To examine the aerodynamic characteristics of the new helmet, including the performance of spoilers and stabilizers that can be added to the helmet shell; and
2. To verify the effectiveness of the aeration system, by identifying the optimum position of both the air inlets and outlets on the shell.

The Fiat Research Center has developed extremely sophisticated code for simulating airflow. The advanced aerodynamic properties of these new helmets are the result of exhaustive testing performed at Fiat's Wind Tunnel Facility, hence the name WTT (wind tunnel tested). Literally hundreds of hours of testing have yielded a design that is virtually invisible to the wind.

Polystyrene Inner Lining

Wide & Narrow Eye Ports

Reversible Air Ducts

Wind Tunnel Tested

Pre-Formed Inner Lining

Micro-Adjustable Pivot

helmets
SPARCO

After determining the optimum design of the shell, we then moved to our new state of the art composite facility for the construction of the helmets. The shell is constructed of 100% fiberglass which was found to yield the best combination of strength and weight. A sophisticated vacuum form resin strengthening process in conjunction with a proprietary Robotic Resin Thickness Control ensures maximum material integrity with a zero tolerance value between shells. Each shell is then electronically measured to verify its accuracy.

The shell openings are then cut using a precision Robotic Hydro-Jet Process. This advanced technical process ensures precise positioning of the visors and ventilation openings as well as perfect edges on all gasket sealing surfaces. The shell is then finished with 3 layers of fire resistant paint, which includes a primer coat, color coat, and clear coat.

Safety, comfort and durability were main objectives for the internal construction. The Polystyrene inner liner works in conjunction with the outer shell to dissipate the energy created during an impact by absorbing and distributing the shock energy over the largest possible surface. The polystyrene foam inner liner is precisely matched to the shape of the shell. This tight tolerance helps maximize impact management.

Fit and comfort are crucial elements in the function and overall performance of a helmet. Extensive testing on the open cell comfort foam has yielded data allowing us to use the optimum density foam in each area of the helmet. This ensures a proper fitting helmet with maximum comfort. A unique channeling system incorporated into the polystyrene liner allows air to circulate more efficiently throughout the helmet, further enhancing the driver's comfort. The interior is then completely covered in a specially knitted 100% ultra soft NOMEX®. We have also designed the inner lining of the F1 model to be completely and easily removed, making cleaning and servicing much easier. Special attention has also been paid to all other hardware and accessories. The chinstrap is a fire resistant aramid fiber with quick pull safety tag. All air ducts, spoilers and stabilizers are as light as possible while still retaining superior strength. Even the visor hardware is made from CNC machined aluminum.

All of this adds up to the finest helmets offered on the market today. No other helmets could have carried the name Sparco.

XL (61cm - 62cm)	00357Z5XL

MEETING THE NEW FORMULA 1 STANDARD.

Our composite and helmets engineers have developed this helmet to meet the new #8860 FIA homologation. The F1 Carbon is the outcome of state of the art technology. Born and tested in the wind tunnel, this 100% Carbon Fiber full face helmet has been engineered to give drivers unequalled safety and performance.

SHELL PROPERTIES & TECHNOLOGIES

- > 100% Carbon Fiber construction offers optimum strength to weight characteristics.
- > Proprietary Robotic Resin Thickness Control combined with a computerized measuring process ensures zero variance between helmets and precise weight uniformity.
- > Precision Robotic Hydro-Jet Cutting Process for all helmet openings eliminates material fatigue which preserves laminate integrity.

VENTILATION CHARACTERISTICS

- > Proprietary Sparco AeroFlow channeling system provides optimal ventilation and air flow throughout the helmet in the most demanding environmental conditions.
- > The WTT System consists of:
 - Four Naca-shaped inlet slots on the chin bar
 - Three reversible inlet/outlet air vents on the crown
 - Two multipurpose exhaust/communication ports

SHIELD TECHNOLOGY

Crystal clear un-obscured vision means better control and comfort.

- > Polycarbonate pre-formed 3 mm. anti-scratch shield.
- > Available in several tint options.
- > Optically correct for distortion free vision.
- > Micro-adjustable pivot with CNC machined aluminum hardware.
- > Elliptical tear-off pins.

AERODYNAMICS

The advanced aerodynamic properties of these new helmets are the result of exhaustive research performed at Fiat's Wind Tunnel Research center in Torino, Italy. Literally hundreds of hours of testing have yielded a design virtually invisible to the wind. Evidence of these aerodynamic achievements is clearly visible throughout the helmet's design.

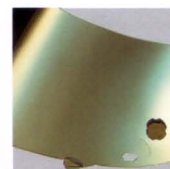

- > Revolutionary shape virtually eliminates turbulence or buffeting.
- > Optional spoiler kits allow customizing to meet specific aerodynamic needs.

ADVANCED ERGONOMICS

Fit and comfort are crucial elements in the function and overall performance of a helmet.

- > The SurroundSoft comfort system utilizes the optimum density foam in each area of the helmet thus ensuring a proper fitting helmet with maximum comfort.
- > Ultra soft knit NOMEX® interior for ultimate safety and comfort.
- > Optional cheek pads available in various thicknesses enable a custom fit.
- > Completely removable inner liner for easy cleaning and service.

OFFICIAL SPARCO HELMET ACCESSORIES

- > Replacement shields in Smoke and Iridium tints.
- > Lightweight spoilers and stabilizers.
- > Tear-offs.
- > Optional cheek pads for custom fitting.

HANS COMPATIBLE

HANS hardware comes pre-installed on the WTT F1 Carbon.

TOP TECHNOLOGY

SPARCO CARBON SEATS ARE MANUFACTURED UTILIZING THE SAME TECHNOLOGY AS SEEN IN FORMULA ONE, WRC, CART, IRL AND THE SPACE SHUTTLE

When it comes to driving seats, only the hard facts count. Seats are subjected to enormous stress loads which are comparable to those placed on the engine. High performance seats enable the driver and car to function in unison.

Sparco is undeniably the most reliable, technically advanced and experienced manufacturer of racing car seats in the world. These results have been made possible by our enormous investment in our research and development laboratories. Samples of frames and shells are taken daily at random, from the production lines and are subjected to destruction tests. Special machinery specifically designed by our technicians, put our seats to the test, to ensure that all components meet the highest standards of resistance and safety.

S-LIGHT CIRCUIT

THE EPITOME

of our commitment to seat technology.

For many years Sparco seats have been the benchmark in racing seat quality, comfort and applied technology. The S-light continues that long standing tradition. The shell has been developed in our new state of the art production facility. The S-Light has a Carbon fiber honeycomb composite shell that can withstand stresses of over 2200 pounds. Many other special features are also included such as fire retardant covers with anti-slip fabric in shoulder and seat area, split adjustable thigh cushions, special shock absorbing material in the head and side areas, plus HANS compatibility.

CIRCUIT

Truly
THE ULTIMATE
competition seat.

Developed in collaboration with the top racing teams in the world, the unique design of the Circuit offers the driver the ultimate in comfort, control and protection. The integrated impact absorbing head restraint feature combined with unparalleled lateral support, the Circuit is fast on its way to becoming the most widely used seat in road and rally racing. Other features include fire retardant covers with anti-slip fabric in shoulder and seat area, pre-formed thigh support to keep legs in the optimum position, special shock absorbing material in the head and side areas, plus HANS compatibility.

EVO

Sparco's DRIVING BREAKTHROUGH in racing seat design.

Evolved from the Rev seat, designed and developed in co-operation with the most prestigious Sparco drivers of the DTM and BTCC Championships. Designed specially for a "free" driving position, even in extreme competition conditions. The special shape of the shell and the new construction technology which "sandwiches" carbon-kevlar-carbon, have given increased rigidity for excellent driving sensibility (while keeping the weight extremely low). Films of homologation crash tests performed by the FIA confirm the Evo's first place in the rigidity/resistance ratio impact tests.

Custom fit
HARNESS BARS
 for 3" harnesses.

Sparco harness bars are manufactured with the highest quality .120-wall steel and designed specifically for our competition 3" harnesses. They are MIG welded by our highly skilled technicians, and engineered to strict safety standards.

Included in the kit are driver's side and passenger side vertical reinforcement tubes. These tubes mount to the base of your B pillar and connect to your harness bar. This helps to anchor the harness bar and creates a triangular reinforcement structure. The triangulation prevents the bar from any vertical movement and keeps the harness bar in place and level at all times. After these pieces are combined the bar also helps to stiffen your chassis dynamics and improves the overall handling characteristics of your vehicle. This unique design also allows you to retain most of the space in the back seat area of your vehicle.

COMPETITION HARNESSSES

A new partnership between SPARCO & SCHROTH

Sparco is proud to announce a new technical partnership with Schroth Racing. At Sparco we strive to bring you the safest most technologically advanced products available. This new partnership will allow us to do just that. For nearly 50 years Schroth has been a leading manufacturer safety harnesses. In 1960 Schroth began conducting simulated crash tests. These tests produced advancements in product quality and performance to meet ever increasing racing safety requirements. With the knowledge gained in this extensive testing Schroth has become the technology leader in competition harnesses. Sparco has long been recognized as the dominant manufacturer in the field of automotive seating. The technical collaboration with Schroth and our combined worldwide presence in the racing community will allow us to achieve greater advancements in seating and safety restraint systems.

PROTECTIVE 3" CUSHIONS

RED 01098S3R **YELLOW** 01098S3G **BLUE** 01098S3A **BLACK** 01098S3N

LAP BELTS

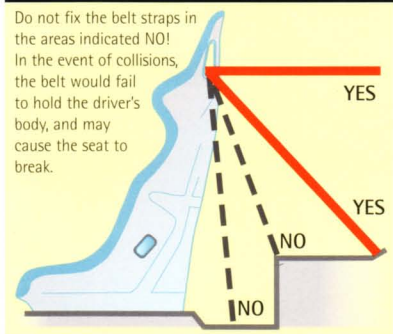

Sparco 3" competition harnesses are used by some of the most popular Formula One, IndyCar and Sports Car teams. Sparco lap belts feature an aircraft quality spring loaded quick release camlock system. This system ensures immediate evacuation in case of vehicle fire. Available in both pull up, and pull down styles. All belts are FIA & SFI homologated.

WARNING:

It is strongly recommended that the shoulder harnesses are fitted as close to horizontal as possible. It is a must that the angle of the shoulder harness does not exceed 45 degrees in relation to the theoretical horizontal axis of the mounting points. It is recommended that the harnesses be mounted to the fixing points suggested by the car manufacturer. The fixing points should always be reinforced by a steel plate fitted on the outer side of the car, not by welding or pop riveting. After an accident or a heavy crash, it is a must to replace the harnesses and carefully re-check their fixing points in the car. Belts should not be in contact with parts which can damage them. Should the belt show any wearing or cuts, it must be immediately replaced.

IMPORTANT ASSEMBLY INSTRUCTIONS

Do not fix the belt straps in the areas indicated NO! In the event of collisions, the belt would fail to hold the driver's body, and may cause the seat to break.

AFFF FIRE SYSTEMS

TOURING & RALLY 02000 (AFFF), FIA APPROVED

Sparco touring and rally car fire systems feature the 02000 foam extinguishing agent AFFF (aqueous film forming foam). 02000 smothers the fire with a fine mist that coats the area extinguishing the fire and laying a film that cools the surface and prevents re-ignition. It is environmentally friendly, non-toxic, non-ozone depleting, non-corrosive and biodegradable. 02000 is approved by the FIA, and SCCA. Available in 4 liter cylinders, each system is supplied with all components for a simple and professional installation. 2 actuating types are offered, pull cable or electrical.

SYSTEM FEATURES:

- Aluminum Cylinders
- Quick release push fitting FO2
- Aluminum anodized bracket with stainless steel straps
- Compact firing heads
- Total discharge activation
- Fully flexible internal pickup tube
- Specially designed nozzle which divides the foam into fine particles

PULL CABLE SYSTEM INCLUDES:

- 5 Meters Semi-Rigid Alloy Tubing
- x1 Pack of Tube Clips
- 12ft. T-handle Cable
- 6ft. T-handle Cable
- Mounting Brackets
- x3 'T' fittings
- x4 Nozzles
- Decal Pack

Shell Type:
F = Fiberglass, T = Tube Frame, C = Carbon

Body Size Fitment:
S = small, M = Medium, L = Large

Bottom Mount measurements in MM.
All other measurements in INCHES.

More than
1000 CUSTOM BASES
available for your Sparco seat.

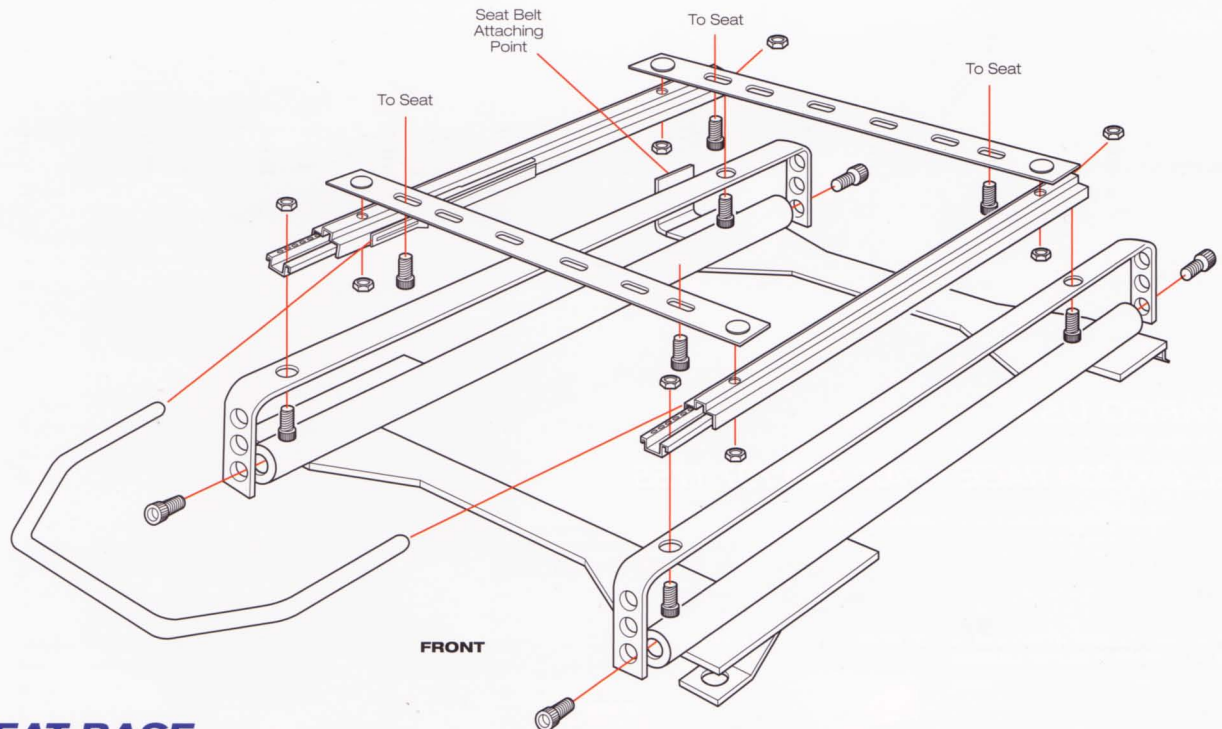

There are more than 1000 vehicle specific bases available. Pictured below are the two different styles of mounts. The "Flat" version is designed to position the seat as low as possible in the vehicle, ideal for helmet clearance. The "Tabbed" version offers variable height selection. Both designs may not be available for every application. Please check with your dealer for details on which bases is suited for your needs.

FLAT SEAT BASE

MODEL NUMBER 400...

Before attempting installation verify that you have all the correct and necessary part numbers for your application. In addition to your vehicle specific bases you will also need parts numbers 00493 (sliding tracks) and 50001 (hardware kit), one each will be needed per seat. We make seat bases for many applications however this does not guarantee that every model Sparco seat will fit in a particular vehicle. Please take the necessary measurements to ensure fitment prior to installation and ask your dealer for recommendations.

TABBED SEAT BASE

MODEL NUMBER 500...

Before attempting installation verify that you have all the correct and necessary part numbers for your application. In addition to your vehicle specific bases you will also need part numbers 00493 (sliding tracks), 500 (base adapter) and 50001 (hardware kit), one each will be needed per seat. We make seat bases for many applications however this does not guarantee that every model Sparco seat will fit in a particular vehicle. Please take the necessary measurements to ensure fitment prior to installation and ask your dealer for recommendations.
